This *2024 State Profile* is provided subject to all terms and conditions of the Woods & Poole Economics, Inc. End User License Agreement including warranty limitations and disclaimers. The End User License Agreement is packaged with this *State Profile* and is also printed on the following page. Please read the “Technical Description of the Woods & Poole 2024 Projections and Database” (Chapter Two), for an explanation of projection methods, data sources, and data definitions. The last year of historical data in this *State Profile* is 2022. Some historical data is estimated and all historical data is subject to revision. All data in this *State Profile* for the years 2023 to 2060 is projected. Forecasts and projections are uncertain and future data may differ substantially from the forecasts and projections in this *State Profile*. Woods & Poole Economics, Inc. makes no guarantee as to the accuracy of the data, analysis, forecasts, and projections in this *State Profile*.

## WOODS & POOLE ECONOMICS, INC. END USER LICENSE AGREEMENT

**IMPORTANT - READ CAREFULLY:** This is a legal agreement ("Agreement") between you (an individual or a single entity) the end user ("Licensee") and Woods & Poole Economics, Inc. ("W&P") which governs use of the W&P product purchased by you from W&P, including proprietary economic and demographic data, analysis and forecasts ("Information") and any software, documentation and supporting materials, whether on printed page(s) or other tangible medium ("Media") or in electronic form (collectively, the "Product"). THIS PRODUCT IS SUBJECT TO PROTECTION UNDER UNITED STATES COPYRIGHT LAWS AND MAY BE USED ONLY IN ACCORDANCE WITH THE TERMS AND CONDITIONS OF THIS AGREEMENT. BY CLICKING ON THE "ACCEPT" BUTTON OR BY DOWNLOADING, OPENING PACKAGE CONTAINING MEDIA OR RETAINING OR USING THE PRODUCT, YOU ACKNOWLEDGE YOU HAVE READ, UNDERSTOOD AND AGREE TO BE BOUND BY THIS AGREEMENT. IF YOU DO NOT AGREE, PRESS "CANCEL", DO NOT DOWNLOAD, OPEN OR USE THE PRODUCT AND RETURN THE PRODUCT TO W&P WITHIN 90 DAYS AFTER PURCHASE FOR A FULL REFUND.

### LICENSE AND RESTRICTIONS

Subject to this Agreement, W&P grants Licensee a non-exclusive license to use the Product solely for Licensee's own internal purposes at a single Licensee facility in a single building (the "Site"). If you entered into this Agreement on behalf of a legal entity that you have authority to bind to this Agreement as Licensee, then Licensee may permit its employees at the Site to use the Product solely on its behalf and, if provided in electronic form, may make a reasonable number of copies as necessary for such use, provided all users and all copies shall be located at the Site. Licensee shall not make the Product available or accessible outside of the Site or on or through the Internet or other externally accessible network. Notices of W&P may not be removed and shall be included on any permitted copies. Licensee shall use reasonable procedures and efforts to ensure that limitations on access to and use of the Product are not exceeded, and will ensure all users agree to and are bound by the restrictions in this Agreement. Licensee shall hold the Product in confidence and not distribute or disclose any Product or Information to any third party except as set forth in the following paragraph.

Licensee may incorporate small excerpts of Information from the Product into Licensee's reports and similar documents (other than formal legal and financial documents) ("Licensee Documents") provided that: (i) each Licensee Document shall be used solely in Licensee's company or be a customized document specially prepared for a single customer of Licensee subject to a written agreement at least as protective of W&P's rights as this Agreement; (ii) in no event shall Licensee Documents be made available for general sale or distribution; (iii) the amount of Information in each Licensee Document must be an insubstantial portion of the overall Information in the Product, and be insubstantial and incidental to the overall Licensee Document; and (iv) source shall be prominently cited on each page or screen display containing Information with any applicable W&P proprietary or copyright notice and Licensee Documents must state that W&P does not guarantee accuracy and use of Information, and any conclusions drawn, are solely the responsibility of Licensee as follows: "Source: Woods & Poole Economics, Inc. Washington, D.C. Copyright 2024. Woods & Poole does not guarantee the accuracy of this data. The use of this data and the conclusion drawn from it are solely the responsibility of [Licensee]."

Licensee may not otherwise reproduce, distribute, sublicense, transfer or disclose any of the Product, or use any of the Product to develop or commercialize any data product or service or provide any of the Product for download over a network. Licensee may not reverse engineer or reverse analyze the Product, except to the extent such may not be restricted under applicable law. Product is licensed, not sold. ALL RIGHTS NOT EXPRESSLY GRANTED HEREIN ARE RESERVED BY W&P OR ITS LICENSORS.

### LIMITED WARRANTY AND DISCLAIMER

W&P warrants that Media (if any) will be free of material defects under normal use for 90 days from shipment. W&P does not warrant Product will meet your requirements or be error-free. Information may contain errors from third parties or inadvertently introduced by W&P. Forecasts and projections are uncertain and future data may differ substantially. Licensee's sole and exclusive remedy under this limited warranty shall be, at W&P's option, to either repair or replace the Media, or refund the purchase price paid to W&P. The above remedy is available only if Licensee returns the Product to W&P with proof of purchase within the warranty period. W&P MAKES NO OTHER PROMISES, REPRESENTATIONS OR WARRANTIES, EITHER EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, WITH RESPECT TO THE PRODUCT OR INFORMATION, INCLUDING ITS CONDITION, ACCURACY, OR CONFORMITY TO ANY DESCRIPTION, AND W&P SPECIFICALLY DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY, NONINFRINGEMENT AND FITNESS FOR A PARTICULAR PURPOSE.

### LIMITATION OF LIABILITY

W&P'S LIABILITY ARISING OUT OF THIS AGREEMENT SHALL NOT EXCEED THE AMOUNT PAID FOR THE PRODUCT. W&P WILL NOT BE LIABLE FOR ANY RELIANCE ON OR CONCLUSIONS DRAWN FROM THE INFORMATION, OR ANY CLAIM AGAINST YOU BY ANY OTHER PARTY, OR ANY CONSEQUENTIAL, INCIDENTAL, SPECIAL, INDIRECT OR EXEMPLARY DAMAGES ARISING OUT OF THIS AGREEMENT OR PRODUCT, EVEN IF ADVISED OF POSSIBILITY THEREOF. THESE LIMITS SHALL APPLY NOTWITHSTANDING FAILURE OF ESSENTIAL PURPOSE OF ANY LIMITED REMEDY AND THE AMOUNT PAID REFLECTS THIS ALLOCATION OF RISK.

### U.S. GOVERNMENT RESTRICTED RIGHTS

Product and documentation are deemed "commercial computer software" and "commercial computer software documentation" pursuant to DFAR § 227.7202 and FAR § 12.212, as applicable. Use, reproduction or disclosing by U.S. Government shall be governed solely by this Agreement and is prohibited except as expressly permitted herein.

### MISCELLANEOUS

This Agreement and rights hereunder may not be assigned or transferred, either directly or indirectly, by Licensee without prior written consent of W&P. This is the entire agreement between the parties relating to the subject matter hereof and no waiver or modification shall be valid unless in writing signed by each party. The waiver of any breach or term shall in no way be construed as a waiver of any other breach or term. If any provision is held to be contrary to law, the remaining provisions shall remain in full force and effect. This Agreement is governed by the laws of the District of Columbia, United States of America, without reference to conflict of laws principles. All disputes arising out of this Agreement shall be subject to exclusive jurisdiction, forum and venue of the state and federal courts in the District of Columbia, USA, and the parties agree and submit to the personal and exclusive jurisdiction of these courts. Should you have any questions regarding this Agreement, or if you desire to contact W&P for any reason, please write: Woods & Poole Economics, Inc., 4910 Massachusetts Avenue, N.W. Suite 208, Washington, D.C. 20016-4368.

## INTRODUCTION

**2024 State Profiles** contain some of the Woods & Poole Economics, Inc. regional data and projections for a particular state and Combined Statistical Areas (CSAs), Metropolitan Statistical Areas (MSAs), Micropolitan Statistical Areas (MICROs), Metropolitan Divisions (MDIVs), and counties in the state. This volume contains an overview chapter outlining the results of the 2024 projections, and highlighting emerging trends in regional economies. Chapter 2 is a technical description of the 2024 Woods & Poole database and regional projection methods. Appendices to Chapter 2 define the geographic areas used by Woods & Poole.

In addition, this volume contains data tables for the United States total, the regions, the state, the Metros, and counties within the state. The statistics contained in the data tables is explained in Chapter 2; the Selected Calculations section of each table presents some commonly used calculations. The number in parentheses following a calculation indicates the rank of the geographic area relative to other geographic areas. Following the data tables are 24 tables that rank counties in the state by population, employment, and income growth historically and through the year 2060.

**2024 State Profiles** by download contain some of the Woods & Poole Economics, Inc. regional data and projections for a particular state and CSAs, MSAs, MICROs, MDIVs and counties in the state or group of states for every year from 1970 or 1990 through 2060. The remainder of this introduction contains the technical description of the download files.

In the **2024 State Profiles** MSAs, CSAs, MICROs, and MDIVs that do not include Connecticut planning regions are defined by the Office of Management and Budget (OMB), July 2023; eleven PMB 2023 metro areas are not included. In the **2024 State Profiles** MSAs, CSAs, MICROs with Connecticut legacy counties are defined by the Office of Management and Budget, March 2020; eight OMB 2020 metro areas are included. The OMB 2020 metros are defined in Appendices 2, 3, and 5 and explained in Chapter 2 (page 42). All eight Connecticut legacy counties are part of one of the six OMB 2020 MSAs and MICROs included in the 2024 database so the entire state of Connecticut is covered in the 2024 database.

To view a comma separated value (CSV) file for a particular geography, such as the San Francisco-Oakland-Fremont, CA MSA in the **California State Profile**, start a spreadsheet program such Excel on a PC or Mac computer. Look up the name of the file from the list at the end of this introduction (beginning on page vii). Then “open” or “retrieve” file WP441860.CSV (the file for the San Francisco-Oakland-Fremont, CA MSA) from the “WPGE0” folder using the spreadsheet commands; the complete file name, including the “.CSV” suffix, may have to be typed; in the spreadsheet software it may need to be specified that a “\*.CSV” file is being opened. There is no software in the **State Profile** download; a spreadsheet program, or some other application, must be used to view the CSV geographic files. The **State Profile** CSV geographic files can be used on Apple, PC, and other computers running any version of Windows, any Apple OS, and other operating systems.

Excel and Windows are registered trademarks of Microsoft Corp. PC is a registered trademark of International Business Machines Corp. Macintosh, is a registered trademark of Apple Computer, Inc.

## 2024 STATE PROFILE Download Files

The data files for the **2024 State Profiles** are provided in comma separated value (CSV) format by variable or by geography. The CSV variable files are compact and allow the user to work with the data in many different spreadsheet, database, graphics, and mapping software programs. The CSV variable files are ideal for comparing MSAs to each other. The CSV geographic files are also already formatted and ready to use in any version of Access, Excel, or other spreadsheet or database software. These files are ideal for viewing data for a specific county or Metropolitan Statistical Area (MSA.)

The data are divided into three Windows or Apple “folders”. The folder “WPVAR” contains the CSV variable files. The folder “WPGEO” contains the individual CSV geographic files for states, MSAs, and counties. The folder “WPCOMP” contains some comparative data such as labor force, unemployment, number of business establishments, land area, and educational attainment.

*In the Woods & Poole database time series data begin in 1969 for employment, income, retail sales, and earnings, 1970 for population by age, and 1990 for population by age, gender, and race, and households by income bracket.*

### CSV Variable File Description (folder “WPVAR”)

The Woods & Poole **State Profile** files in the CSV variable format contains annual data from 1969 or 1970 or 1990 through 2060 for the U.S., state(s), region(s), Combined Statistical Areas (CSAs), MSAs, Micropolitan Statistical Areas (MICROs), Metropolitan Divisions (MDIVs), and counties in a state or group of states. Each variable is in a separate CSV variable file and there are 122 variables in all; the names of the files are explained below. All of the CSV variable files are in the “\WPVAR” folder in the download. Each file begins with data for the U.S., followed by region(s), state(s), metros, and counties.

*MSAs are Metropolitan Statistical Areas; CSAs are Combined Statistical Areas; MICROs are Micropolitan Statistical Areas; and MDIVs are Metropolitan Divisions; metros without Connecticut planning regions are defined by the Office of Management and Budget, July 2023; metros with Connecticut legacy counties are defined by the Office of Management and Budget, March 2020.*

*BEA economic areas are aggregates of contiguous counties which measure cohesive regions in the U.S. There are 179 BEA economic areas and they are defined by the U.S. Department of Commerce, 2007.*

### CSV Variable File Record (or line) Definition

At the beginning of each line of data in each CSV variable file, there are nine “fields”, or columns, in quotes which facilitate identifying and sorting the various geographies. The complete definition of the “records” (or lines) of the CSV variable file fields is as follows:

- Field 1: A 3 digit code identifying the file.
- Field 2: A 5 digit FIPS code for states and counties
- Field 3: A 1 digit Woods & Poole code for geographic area type; “1” is for the U.S. total, “2” is for regions, “3” is for states, “6” is for CSAs, “4” is for MSAs, “C” is for MICROs, “V” is for MDIVs, and “5” for counties.
- Field 4: A 1 digit code for BEA region.
- Field 5: A 3 digit code for BEA economic areas.
- Field 6: A 5 digit FIPS code for MSAs.
- Field 7: A 3 digit FIPS code for CSAs.
- Field 8: A 5 digit FIPS code for MDIVs.
- Field 9: A 5 digit FIPS code for MICROs.
- Field 10: The name of the geographic area in quotes.
- Fields 11 to 102: Data field for each year 1969 to 2060 (92 years)

Administrative & Waste Services Employment	TT047.CSV

*Employment and earnings by  
NAICS industries are estimated for  
the years 1969 to 2000.*

**CSV File Variable Units**

The units of the variables in the **2024 State Profile** CSV files are as follows:

Employment in thousands of jobs.  
Population in thousands of persons.  
Households in thousands. Median Age of population in years. Income, Earnings, and Gross Domestic Product (GDP) in millions of 2017 dollars.  
Average Size of Households in number of people. Wealth Index U.S. = 100.  
Retail Sales in millions of 2017 dollars.  
Mean Household Income and Personal Income per Capita in current or 2017 dollars. Hispanic Population is persons of Spanish Origin, regardless of race.

The last year of historical data from the U.S. Department of Commerce for employment, earnings, income, GDP, and population data is 2021; retail sales data are historical for 1972, 1977, 1982, 1987, 1992, 1997, 2002, 2007, 2012, and 2017 from U.S. Department of Commerce; household data are historical for 1970, 1980, 1985, 1990, 2000, 2010, and 2020 from U.S. Department of Commerce; households by money income bracket (in 2009 dollars, not 2017) are historical for 1990, 2000, and 2010 only, from U.S. Department of Commerce; all other years of data, 1970-2022 or 1990-2022, for retail sales, households, population, GDP, and households by money income are estimated by Woods & Poole; all data, 2023-2060, are projected by Woods & Poole.

**Please read “Technical Description of the 2024 Regional Projections and Database” (Chapter Two) for an explanation of data sources, data definitions, and projection methods. Historical data is subject to revision. Projections are uncertain and future data may differ substantially from Woods & Poole projections. Woods & Poole Economics, Inc. makes no guarantee as to the accuracy of the historical data and projections in the 2024 State Profile.**

**CSV Geographic Area File Description (folder “WPGE0”)**

Each data table in a **2024 State Profile** is in a separate CSV geographic file in the download. All of the CSV geographic files are in the folder “WPGE0” in the download. The name of each CSV geographic file begins with “WP” followed by a one-digit code indicating the type of geography (“1” for U.S., “2” for regions, “3” for states, “4” for MSAs, “5” for counties, “6” for CSAs, “C” for MICROS, and “V” for MDIVs.) The next five characters of the name are the FIPS code for the geographic area. The files all have a “.CSV” extension. The names of all of the CSV geographic files are listed on the following pages.

**All data for a particular geography can be found in the CSV files in the “WPGE0” folder.**

To view a CSV geographic file for a particular geography, such as the San Francisco–Oakland–Fremont, CA MSA in the **California State Profile**, start a spreadsheet program such as Access or Excel on a PC or Mac computer. Look up the name of the file from the list at the end of this introduction (beginning on page vii). Then “open” or “retrieve” file WP441860.CSV (the file for the San Francisco–Oakland–Fremont, CA MSA)

from the “WPGE0” folder using the spreadsheet commands; the complete file name, including the “.CSV” suffix, may have to be typed; in the spreadsheet software it may need to be specified that a “\*.CSV” file is being opened. There is no software in the **State Profile** download; a spreadsheet program, or some other application, must be used to view the CSV geographic files. The CSV geographic files can be used on Mac, PC, and other computers running any version of Windows, any Mac OS, and other operating systems.

*Data on labor force, unemployment, number of business establishments by NAICS industries, land area, and educational attainment can be found in the “WPCOMP” folder.*

Some Comparative Data can be found in the CSV file “TTCOMP.CSV” (where “TT” is any state) in the “\WPCOMP” folder, or directory. The “WPCOMP.CSV” file contains civilian labor force, employed, unemployed and the unemployment rate, annually for 2014 to 2023 from the Bureaus of Labor Statistics. It also contains the number of business establishments by 1-digit NAICS and by size (1-49 employees and 50 or more employees) for 2018 and 2019, respectively, from the U.S. Department of Commerce. In addition it contains the 2010 land area, as well as data on educational attainment (percent of the population age 25 and over not completing high school, completing high school only, and completing 4 or more years of college) for 1970, 1980, 1990, 2000, and 2010 from the U.S. Department of Commerce.

## Chapter 1. Overview of the 2024 Projections

### Introduction

The expected long-term outlook for the United States economy is one of steady growth through the year 2060. Although periodic business cycles will interrupt and change the growth trajectory, the nation's employment and income are expected to rise every year from 2023 to 2060. Gross Domestic Product (GDP) is forecast to grow at an average annual rate of 1.8% over the next three decades. Although employment growth has been uneven in recent years, with particularly sharp job losses during the pandemic and gains after, the economy is expected to grow more evenly in 2023 and 2024 and produce steady job gains through 2060. In the long-run, the civilian unemployment rate is expected to be 4.5% by 2060. Inflation, as measured by the annual percent change in the Personal Consumption Expenditure Price Index, is forecast to decrease from 6.5% in 2022 to 2.9% by 2060 (see Figure 1). Total employment is projected to increase from 212.4 million jobs in 2022 to 317.2 million in 2060. And total residential population is projected to reach 417.0 million in 2060, up from a 2022 Census estimate of 333.3 million people; the United States is expected to remain the world's third most populous nation through 2060. Personal income per capita (in 2017 dollars) is projected to increase from \$56,421 in 2022 to \$95,949 in 2060. These macroeconomic projections are the national assumptions on which the 2024 regional projections are based.

**Figure 1. U.S. Unemployment and Inflation, 1948-2060**

**Note:** Historical data, 1948-2023, from U.S. Department of Commerce (inflation) and U.S. Department of Labor (unemployment); projected data, 2024-2060, from Woods & Poole Economics, Inc.; civilian unemployment rate is an annual average; inflation is the annual percent change in the chain-type Personal Consumption Expenditure Price Index.

*The nation's fastest rates of population growth are expected to be in the West and Southeast.*

The growth in the United States economy and population is expected to be spread somewhat evenly among the regions of the country. Although the Northeast (New England, Mideast, and the Great Lakes) is expected to grow more slowly than the Southeast and West (Southwest, Rocky Mountains, and Far West), it is expected to create many new jobs. Total employment in the Northeast is expected to increase by 23.6 million jobs from 2022 to 2060, 30.1 million for the Southeast and 46.6 million for the West. The West region is expected to replace the Northeast as the nation's most populous with 157.2 million people; the Northeast is expected to have 119.4 million people and the Southeast 116.0 million people. The Plains region is projected to grow more slowly in terms of both employment and population and remain the least populous region of the nation.

Although the Northeast is expected to grow steadily, it is expected to grow far less rapidly than the Southeast and West. The average annual rate of population growth for the Northeast from 2022 to 2060 is projected to be 0.17% compared to 0.77% for the Southeast and 0.88% for the West. The fastest growing Metropolitan Statistical Areas (MSAs) are all forecast to be in the Southeast and West. All of the top ten MSAs, ranked in terms of projected average annual rates of population growth, are expected to be in the South and West: Wildwood-The Villages FL, St. George UT, Austin-Round Rock-San Marcos TX, Las Vegas-Henderson-North Las Vegas NV, Cape Coral-Fort Myers FL, Naples-Marco Island FL, Raleigh-Cary NC, Fayetteville-Springdale-Rogers AR, Port St. Lucie FL, and Orlando-Kissimmee-Sanford FL.

The following overview of the 2024 projections is divided into four parts. First, the long-term outlook for the Northeast is presented, with a discussion of the manufacturing sector projections. Second, a discussion of the Plains states and the prospects for strong growth in the major metropolitan areas is presented. Third, a discussion of the strong Southeast economy and its ability to generate large numbers of jobs in most sectors is presented. And fourth, the outlook for population and employment growth in the West is presented with an illustration of the widespread nature of the region's economic growth.

*Although job growth in the Northeast is expected to be slower than other regions, the net change in employment from 2022-2060 is forecast to be 23.6 million jobs.*

## **Northeast Outlook**

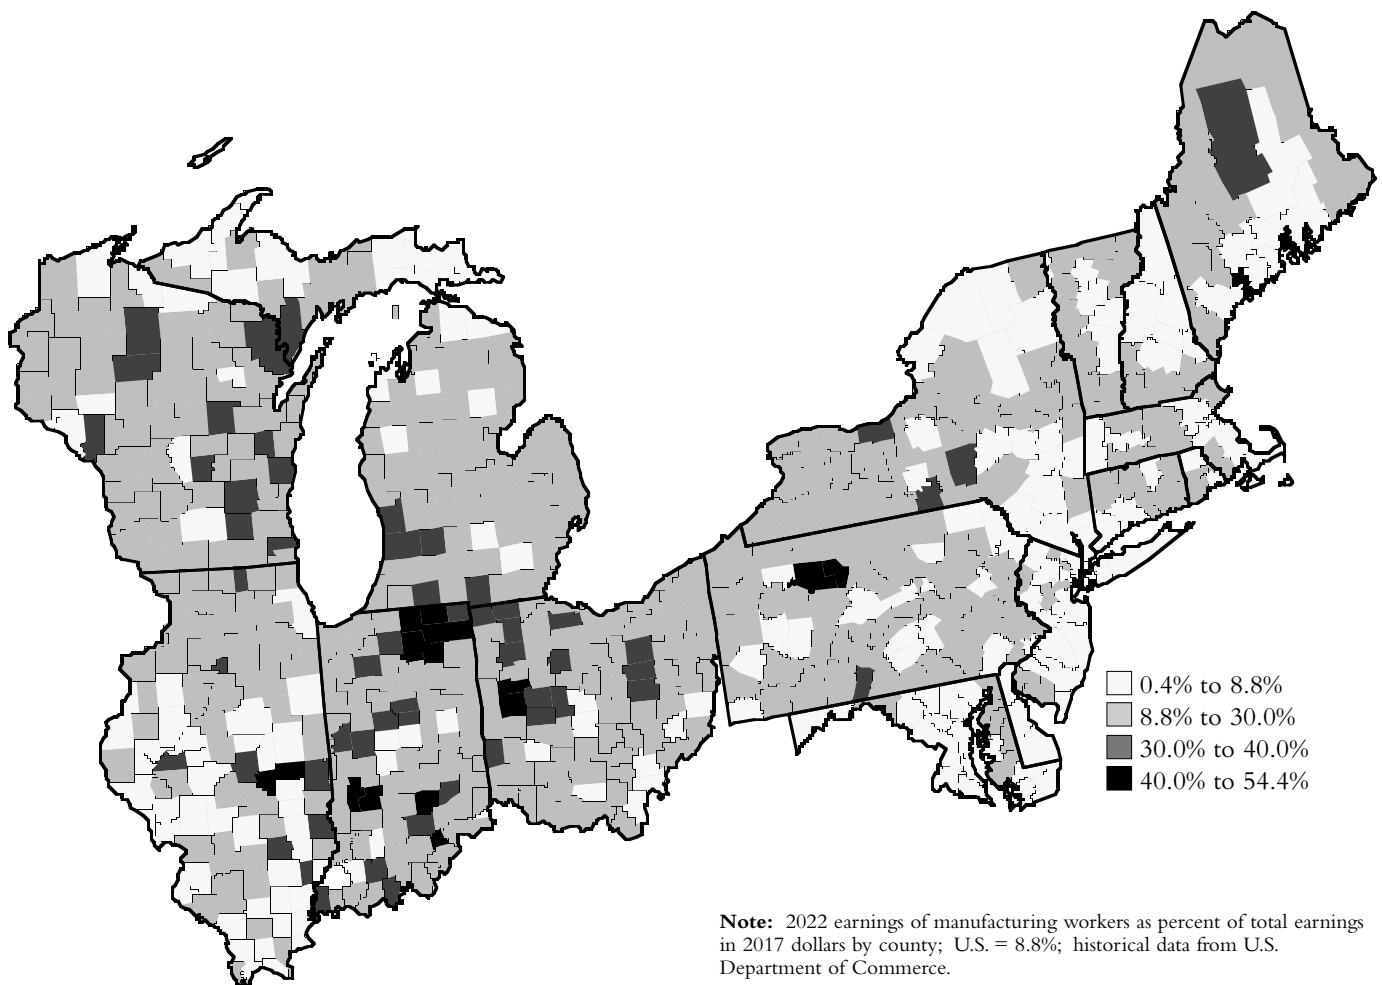

The broad Northeast region (defined as New England, Mideast, and Great Lakes) is forecast to have relatively slow, steady growth over the next three decades. Total employment in New England is forecast to increase at an average annual rate of 0.84% from 2022 to 2060. Total employment in the Mideast region is projected to increase 0.86% a year through 2060; in the Great Lakes region, it is forecast to grow 0.59% per year. In contrast, the nation as a whole is expected to create new jobs at an average annual rate of 1.06% from 2022 to 2060. Population growth is also expected to remain below the national average over the next thirty years. In New England, total population is forecast to increase 0.20% a year, in the Mideast 0.18%, and in the Great Lakes 0.14% a year on average from 2022 to 2060.

Although growth throughout most of the Northeast is projected to be below the national average, there are areas which are expected to have relatively rapid employment and population growth over the next three decades. Metropolitan Statistical Areas the the Northeast such as Morgantown WV,

Allentown–Bethlehem–Easton PA–NJ, Lexington Park MD, Dover DE, Lancaster PA, Columbus OH, Madison WI, Indianapolis–Carmel–Greenwood IN, Boston–Cambridge–Newton MA–NH, Kiryas Joel–Poughkeepsie–Newburgh NY, and York–Hanover PA are all forecast to have employment growth greater than the national average through 2060. Most of these areas have relatively strong manufacturing economies (Allentown and Indianapolis), are centers for state and local government employment (Dover and Columbus), or are education and research centers (Madison and Boston).

Even though the Northeast is not expected to have rapid growth over the next thirty years, the size of the region means that even relatively slow growth can translate into large increases in population and jobs. New England is forecast to gain 3.1 million jobs from 2022 to 2060, the Mideast 12.4 million, and the Great Lakes 7.3 million jobs. The stable employment base in the Northeast creates relatively high levels of personal income. Total personal income in the region is expected to reach \$12.0 trillion in 2060 (2017 dollars), up from \$6.6 trillion in 2022; in 2060, the Northeast is forecast to receive 30.0% of total U.S. personal income. Income per capita in the Northeast is expected to remain high through mid-century. In 2060, New England, and the Mideast are forecast to rank one and two, respectively, in income per capita among all regions. New England's projected income per capita of \$115,591 is 20.5% above the expected U.S. level of \$95,949 in 2060. High levels of income make the Northeast the largest regional consumer market in the U.S. Total retail sales are expected to be \$3.68 trillion in 2060, up from \$2.29 trillion in 2022 (in 2017 dollars).

**Figure 2. Percent of Total Earnings from Manufacturing for the Northeast, 2022**

The economic outlook for the Northeast depends in part on the prospects for stability in manufacturing output and employment. Even though manufacturing experienced very sharp employment declines in the 2008–09 recession, the industry is expected to remain significant in the Northeast region through 2060. As illustrated in Figure 2, manufacturing earnings account for a high percentage of total earnings. In 2022 manufacturing earnings accounted for more than 30% of total earnings in large portions of the Northeast, with most county levels above the national average of 8.8%. Manufacturers usually “export” their goods out of the locality in which they are produced, bringing additional jobs in support industries and income into the region. In much of the Northeast, manufacturing jobs form the basis of regional economies. In 2022, 37.6% of U.S. manufacturing jobs were in the Northeast; by 2060, that number is expected to only decline to 36.3%.

Manufacturing has undergone a great deal of change throughout the Northeast since World War II. Many major industries have moved production out of the region or have ceased production altogether (e.g., consumer electronics, steel, and textiles), and some industries have expanded and new ones have emerged (e.g., electronic equipment, food processing, and chemicals). The net result of the change in the mix of industries in the Northeast has been a decline in total manufacturing employment. In 1970, there were 10.3 million manufacturing jobs in the region; by 2000, there were only 7.4 million and during the first years of the new century manufacturing jobs declined sharply in the Northeast to 5.1 million in 2022; by 2060 there are expected to be 5.0 million manufacturing jobs. The precipitous, and in many instances permanent, declines in manufacturing employment after 1979 and during the 1981–82, 2001–02 and 2008–09 recessions are expected to give way to slower and less abrupt declines in manufacturing employment during the next thirty years. The industries that remain in the Northeast are projected to maintain relatively high productivity and somewhat stable employment levels.

### Plains Outlook

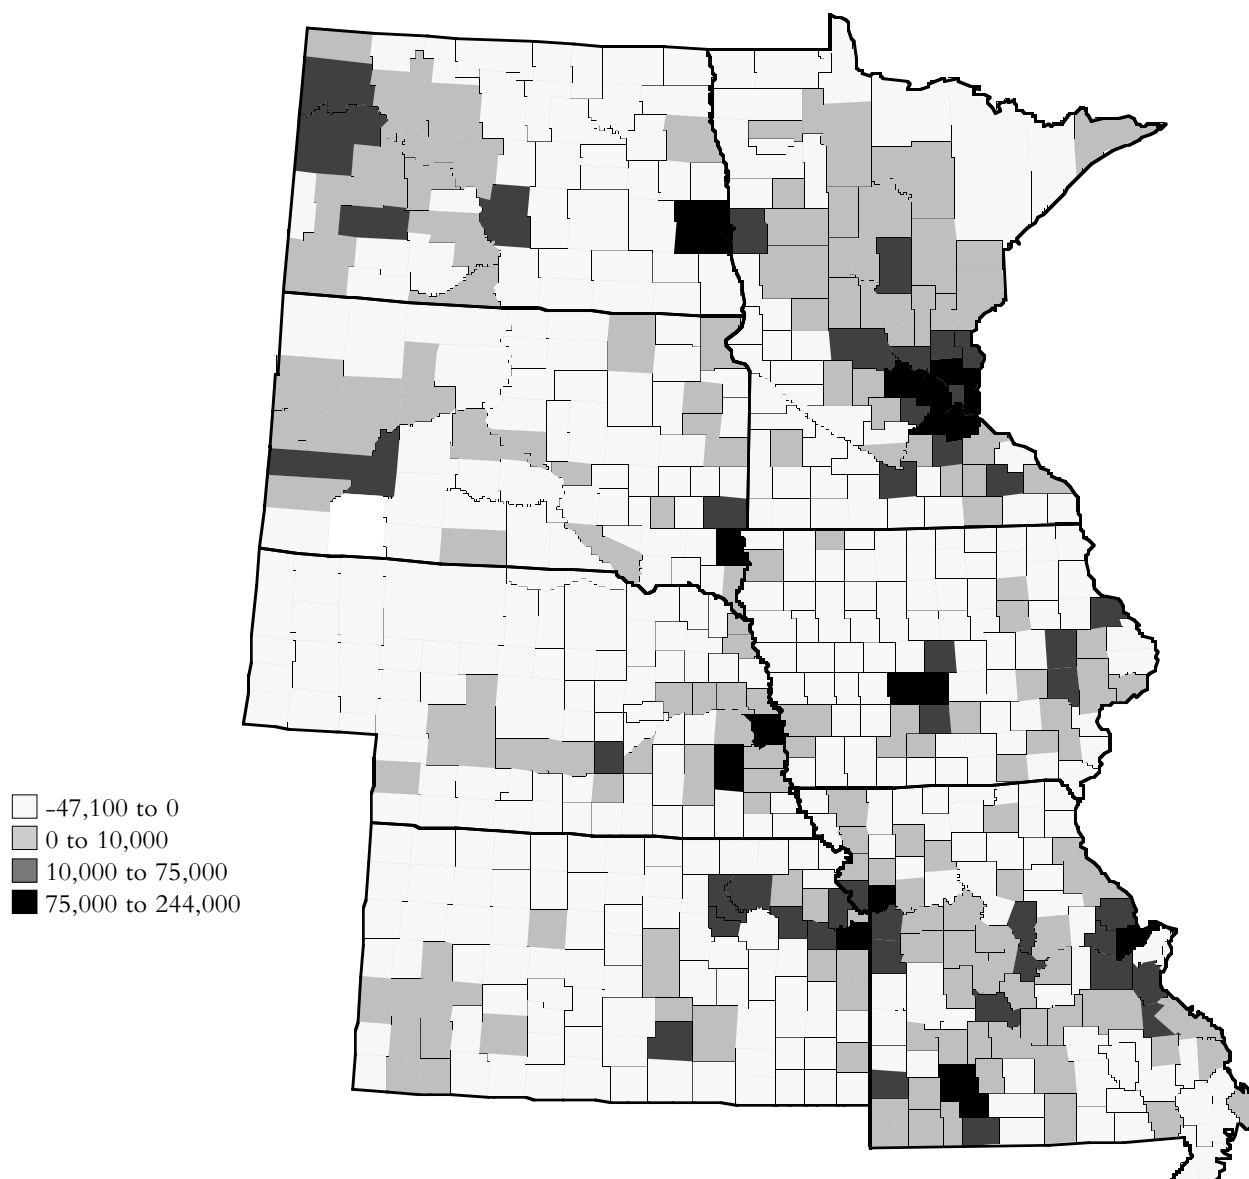

*The metropolitan areas in the Plains are projected to have the greatest population growth in the region.*

The Plains region (Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota) is expected to have population and employment growth rates just below the national average through 2060. Population and employment are both forecast to increase at an average annual rate of 0.37% and 0.71% respectively from 2022 to 2060. The net growth in population and employment for the region as a whole masks a wide disparity in growth for the states and counties within the Plains. As illustrated in Figure 3, most of the counties in the Plains are projected to either have a net population loss or very little change over the next thirty years (the light areas on the map indicate negative projected population growth). Excluding Minnesota and Missouri, there are 416 counties in the Plains region; only eight counties in North Dakota and South Dakota combined are expected to have population growth of over 10 thousand people between 2022 and 2060; similarly, only seven counties in Iowa, four counties in Nebraska and eight counties in Kansas are forecast to have significant population gains over the thirty year period. In terms of square miles, most of the land area in the Plains region is expected to have population loss or very little growth through the year 2060.

Population declines are forecast primarily in rural agricultural counties in the Plains region that do not have significant oil extraction activity. Farm employment is not expected to grow significantly over the next three decades. As agricultural productivity has increased in last fifty years, fewer workers have been needed to produce increasing amounts of output. Innovations in seeds, fertilizers, insecticides, irrigation, planting, and harvesting have increased crop yields and had a net labor-saving effect. Agriculture has been affected by technological improvements in chemicals, machinery, materials, and techniques with the result being increased output with less labor input. Although increased output per worker has meant lower costs and, in some cases, increases in farm income, the resulting decline or very slow growth in farm employment has caused many farm communities to lose jobs and population. Farming is an “exporting” sector of a regional economy. Because of this, agricultural income and employment support the demand for locally produced goods and services. Flat growth in the number of farmers or farm workers can multiply through a regional economy creating slow growth in employment in retail trade, construction, finance, and services; eventually,

**Figure 3. Population Change for the Plains, 2022-2060**

**Note:** Projected net change in total residential population, 2022-2060, by county, from Woods & Poole Economics, Inc.

employment declines result in population out-migration as workers entering the labor force look for better opportunities elsewhere or as unemployed workers and their families move in search of jobs.

The trend of increasing farm productivity and flat farm employment is expected to continue through the year 2060. Increased international demand for food suggests that Plains farm output can be expected to grow in coming years. Even though farm employment in the Plains, including proprietors, declined from 777 thousand jobs in 1970 to 436 thousand in 2022, it is expected to decline modestly to 409 thousand by 2060. Many counties in the Plains have lost population steadily over the past fifty years. Although many counties in the region are projected to continue experiencing a decline in population through 2060, some formerly agricultural counties and larger MSAs in North Dakota are expected to experience significant population (and employment) gains from oil extraction activity. The Fargo ND-MN MSA is forecast to create jobs at a rate of 1.33% a year through 2060, the 51st fastest rate of growth forecast for any MSA.

Although much of the geographic area of the Plains states is affected by changes in farm employment, most of the population resides in metropolitan areas that are forecast to experience steady growth over the next three decades. Most of the MSAs in the Plains regions are forecast to have net gains in employment from 2022 to 2060. The Minneapolis-St. Paul-Bloomington MN-WI MSA is forecast to create 1.12 million jobs from 2022 to 2060, Kansas City MO-KS is expected to create 585 thousand jobs, and St. Louis MO-IL is projected to create 396 thousand jobs. Also, Fargo ND-MN, Sioux Falls SD-MN, Bismarck ND, and Des Moines-West Des Moines IA are all expected to have strong employment growth over the three decades as firms move into these cities because of available land and skilled labor. MSAs in the Plains generally have diversified economies and are regional centers for retail trade and business services. In addition, MSAs in the Plains are centers for transporting and processing agricultural output produced in surrounding rural areas. Since many industries in the MSAs depend on the amount of farm output, and not on the number of farmers or farm workers, they are expected to grow over the next four decades. Manufacturing employment in the Plains, including food processing and packaging, is expected to have experience small gains in number of jobs increasing from 1.22 million jobs in 2022 to 1.25 million in 2060.

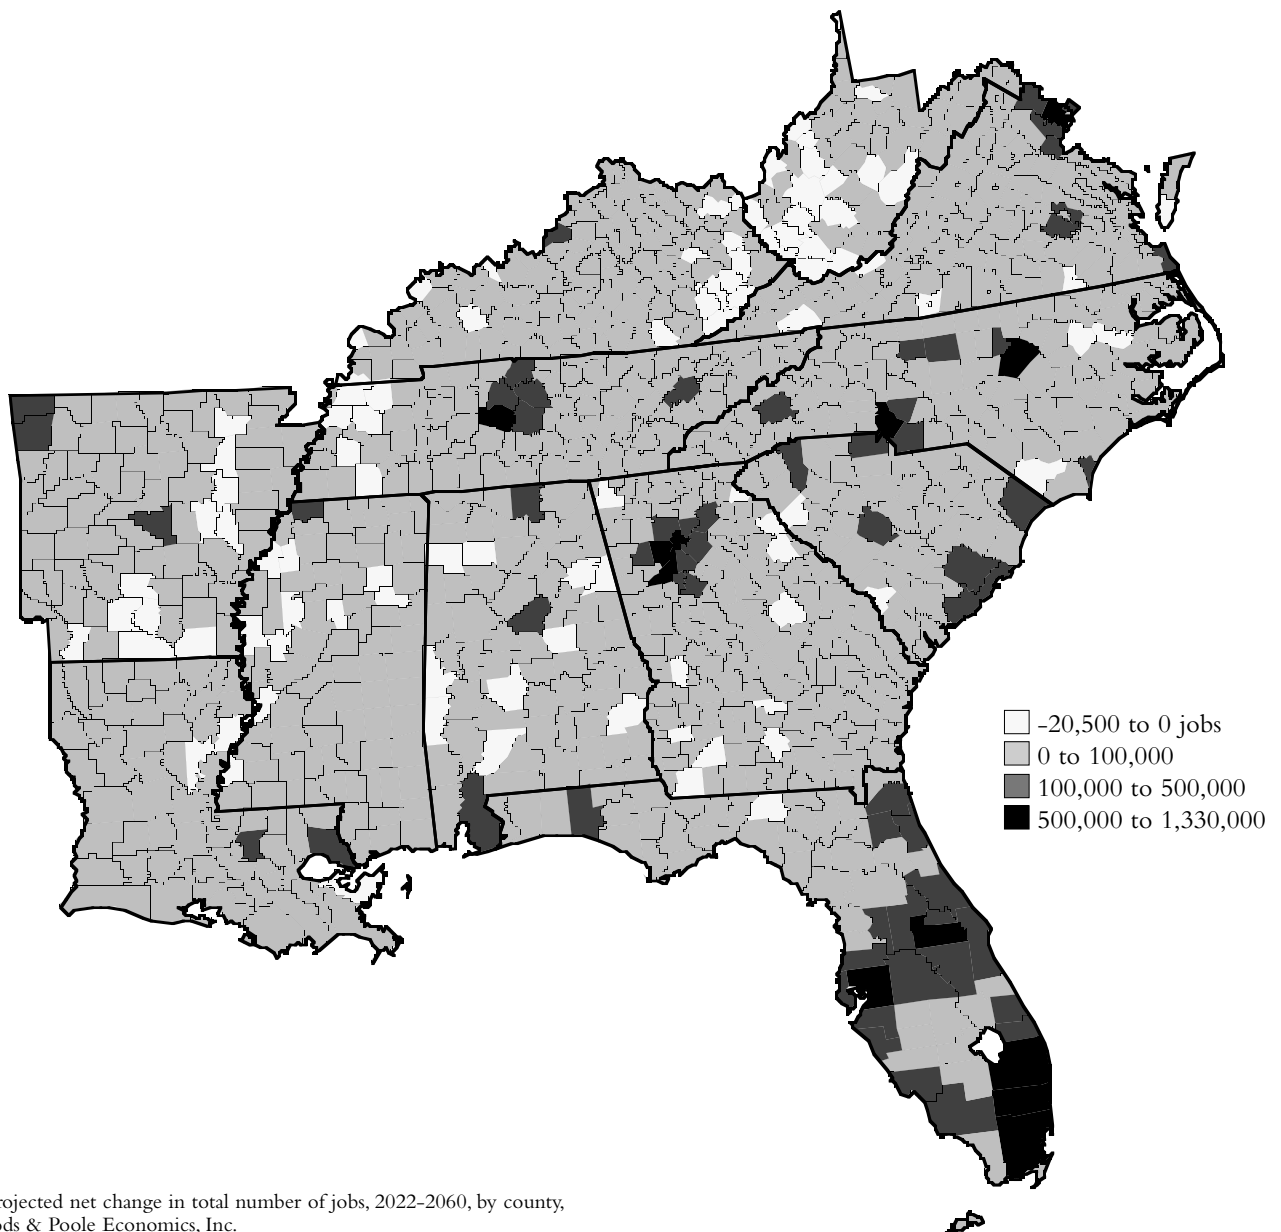

### **Southeast Outlook**

Population and employment in the Southeast are forecast to increase more rapidly than the U.S. average over the next three decades. Employment in the Southeast is forecast to grow at an average annual rate of 1.18% from 2022 to 2060 and population is expected to grow 0.77% per year. Employment growth is expected to be widespread throughout the Southeast. The Southeast is expected to fully recover from the 2020 pandemic recession and continue steady growth after 2023. Figure 4 illustrates projected employment growth across the Southeast; almost all counties in the Southeast are expected to have positive employment gains, with most of the growth centered in

Florida, North Carolina, and Georgia. The Southeast is forecast to create 30.1 million jobs from 2022 to 2060, and the population of the region is forecast to increase by 29.2 million people.

The Southeast has three distinct regional economies, each with differing patterns of growth: (1) Florida (2) the high growth MSAs in Georgia, North Carolina, Tennessee, and Virginia and (3) the rest of the Southeast. Historically, Florida has been one of the fastest growing states in the nation and it is expected to continue to generate jobs and attract migrants at a steady pace over the next thirty years. Florida's relatively strong, diverse service and agricultural economy coupled with a steady inflow of retirees has historically provided a stable basis for economic growth. The population of Florida is expected to grow at an average annual rate of 1.07% from 2022 to 2060, a slowdown from

**Figure 4. Employment Change for the Southeast, 2022-2060**

**Note:** Projected net change in total number of jobs, 2022-2060, by county, from Woods & Poole Economics, Inc.

the 1969 to 2022 growth of 2.31% a year, but well above the national average, and the fifth fastest projected rate for any state.

The high growth MSAs in Georgia, North Carolina, Tennessee, and Virginia all have relatively strong service and manufacturing economies or are regional centers for retail trade, transportation, and services. Raleigh-Cary NC, Charlotte-Concord-Gastonia NC-SC, Nashville-Davidson--Murfreesboro--Franklin TN, and Charlottesville VA, despite job losses in some manufacturing industries such as furniture and textiles, all have relatively strong economies that are expected to continue to generate new jobs over the next thirty years. Although manufacturing employment has declined in many parts of the Southeast since 2001, particularly during the 2008-09 recession, many manufacturing MSAs are expected to grow through 2060, especially those involved in high value manufacturing. Prior to 2001 demand had been relatively strong for the goods traditionally manufactured in the Southeast. As U.S. household formation and population grew, the demand for textiles, furniture, wood products, and food processing has also grown. The higher value industries in these sectors, such as upholstered furniture, and food processing in general are expected to have stable employment through 2060.

***The Atlanta-Sandy Springs-Roswell, GA MSA and Miami-Fort Lauderdale-West Palm Beach, FL MSA are projected to generate more new jobs than any other metropolitan areas in the Southeast.***

The Atlanta-Sandy Springs-Roswell, GA MSA is expected to generate the second largest number of jobs of any MSA in the Southeast over the next three decades. Total employment in Atlanta is expected to increase from 4.38 million in 2022 to 7.85 million in 2060, a gain of 3.48 million jobs, the fourth largest gain projected for any MSA in the nation. Atlanta is a regional center of trade and commerce for much of the Southeast outside of Florida. Service employment in Atlanta is forecast to increase by 2.60 million jobs from 2022 to 2060. Employment is also expected to increase in transportation, communications, public utilities, retail trade, finance, insurance, and real estate.

## **West Outlook**

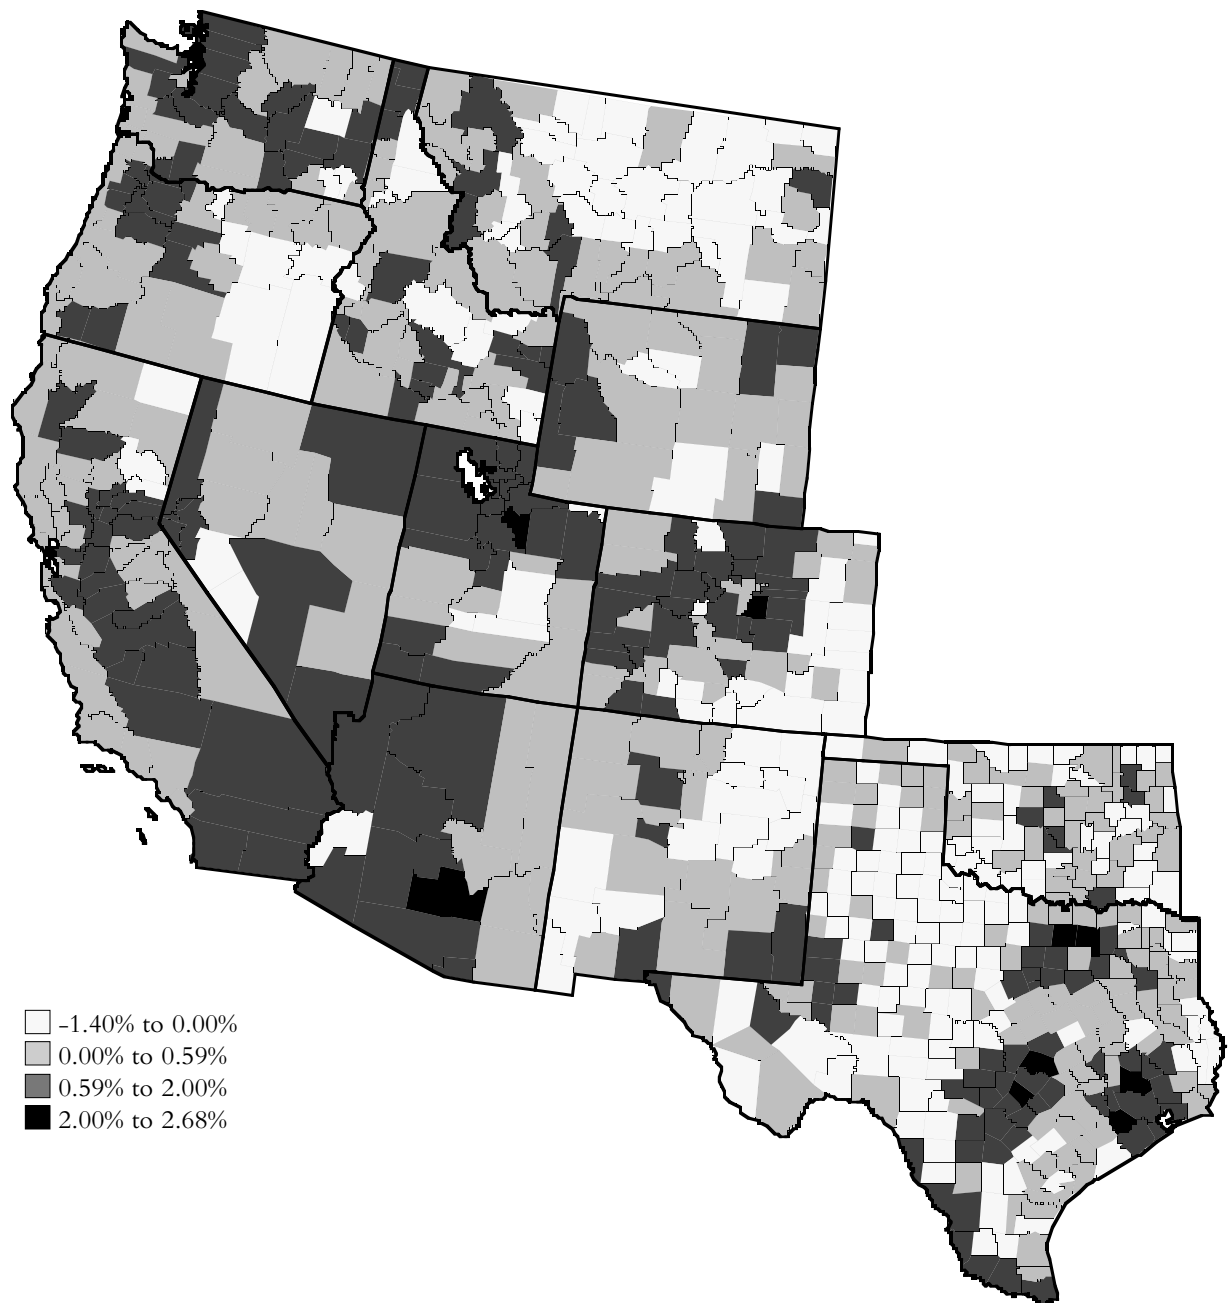

The broad West region, consisting of the Southwest, Rocky Mountain, and Far West regions, is forecast to experience the most growth of any region in the nation over the next thirty years. Population in the West is forecast to increase by 44.5 million people between 2022 and 2060. By the year 2060, 38% of all Americans are expected to reside in the West - up from 24% in 1970 and 34% in 2022. The West is expected to generate 46.6 million jobs from 2022 to 2060, 44% of the projected total U.S. job gain.

Of all the states in the region, California and Texas are projected to have the largest gains in population and employment through the year 2060. However, the region's growth is expected to become more dispersed since the rates of growth are expected to be higher in the other western states. Figure 5 illustrates projected population rates of growth among the counties in the West from 2022 to 2060. Although growth in the West slowed significantly during the 2008-09 recession, new population growth in the U.S. is expected to occur in the West over the next thirty years. Much of the region is expected to have population growth rates above the national average, and, in some counties, population is forecast to grow at more than 2.0% a year. The counties of Rockwall TX, Fort Bend TX, Pinal AZ,

Williamson TX, and Douglas CO are all expected to have population growth rates above 2.30% per year through 2060. Overall population growth in the West is expected to be most rapid in Nevada, Utah, Arizona, Texas, Idaho, and Colorado from 2022 to 2060 – these states rank first, second, third, fourth, sixth, and seventh, respectively, among all states in projected rates of population growth.

Historically, economic and population growth in the West has been cyclical. Most states in the region have experienced sharp business downturns since 1970, often counter-cyclical to U.S. business cycles. In the early 1970s,

**Figure 5. Annual Population Growth for the West, 2022-2060**

**Note:** Projected average annual rate of net population growth, 2022-2060, by county, from Woods & Poole Economics, Inc.; U.S. = 0.59%.

***Despite significant job declines in the 2020 pandemic recession, California is forecast to have the second largest employment gains of any state from 2022 to 2060.***

Washington state had a serious regional recession as a result of layoffs in airplane manufacturing. The production of lumber and wood products is often correlated with national construction demand, and U.S. construction downturns have resulted in regional recessions in Idaho, Oregon, and Washington. Oil and natural gas producing regions in Alaska, Colorado, Oklahoma, Texas, and Wyoming had strong growth in the 1970s and even during the 1981–82 recession, but then had a severe recession in 1986 as oil prices dropped suddenly. Parts of Arizona, Idaho, and Utah have all experienced recessions related to metal and mineral mining. Nevada experienced a temporary regional slowdown as a result of declines in travel and tourism at the end of 2001. And California had a sharp recession at the end of the Vietnam War as defense expenditures were reduced in the state. Currently, the excess supply of homes in parts of Nevada and in the Central Valley of California is depressing home values and reducing demand for new construction. The downturn in housing construction has a multiplier affect on some regional economies. However, as with historical business cycles in the West, Nevada and California are projected to resume steady population and employment growth through 2060.

The varying business cycles in regional economies of the West underscore a source of the region's enduring economic strength: its tremendous economic diversity. The diversity of economic activity in the West (e.g., natural resources, agriculture, manufacturing, trade, and services) enables many of the state economies to maintain employment and income levels when a key sector is experiencing reduced demand. In many of the western states the economies are large and very well-balanced. In addition, many of the goods and services produced in the West have national or international niches. Much of the total U.S. output of agricultural goods (e.g. fruits, vegetables, and livestock), aircraft, oil and natural gas, lumber and wood products, and electronic equipment is produced in the West. The diversity of many of the state economies helps them withstand business cycles and generate strong economic growth during recoveries.

Some of the major metropolitan areas in the West, particularly in California, are projected to have slower growth over the next thirty years than they have in the past. Relatively high population and employment densities, high costs, and the proximity of less expensive places to live in nearby communities are all expected to contribute to slower projected growth for some MSAs. The San Francisco–Oakland–Fremont CA MSA is forecast to have population growth of 0.50% a year from 2022 to 2060.

## Chapter 2. Technical Description of the Woods & Poole Economics, Inc. 2024 Regional Projections and Database

### Introduction

The Woods & Poole Economics, Inc. database contains more than 900 economic and demographic variables for every county in the United States for every year from 1970 to 2060. This comprehensive database includes detailed population data by age, sex, and race; employment and earnings by major industry; personal income by source of income; retail sales by kind of business; and data on the number of households, their size, and their income. All of these variables are projected for each year through 2060. In total, there are over 200 million statistics in the regional database. The regional model that produces the projection component of this database was developed by Woods & Poole. The regional projection methods are revised somewhat year to year to reflect new computational techniques and new sources of regional economic and demographic information. Each year, a new projection is produced based on an updated historical database and revised assumptions.

The fact that the proprietary Woods & Poole economic and demographic projections rely on a very detailed database makes them one of the most comprehensive county-level projections available. A description of some characteristics of the database and projection methods is contained in this chapter.

### Overview of the Projection Methods

The strength of Woods & Poole's economic and demographic projections stems from the comprehensive historical county database and the integrated nature of the projection methods. The projection for each county in the United States is done simultaneously so that changes in one county will affect growth or decline in other counties. For example, growth in employment and population in Houston will affect growth in other metropolitan areas, such as Cleveland. This reflects the flow of economic activity around the country as new industries emerge or relocate in growing areas and as people migrate, in part because of job opportunities. The county projections are developed within the framework of the United States projection made by Woods & Poole. The U.S. projection is the control total for the 2024 regional projections and is described in the "Overview of the 2024 Projections" chapter included in Woods & Poole publications.

The regional projection method used by Woods & Poole - projecting the counties together to capture regional flows and constraining the results to a previously determined United States total - avoids a common pitfall in regional projections. Regional projections are sometimes made for a city or county without regard for potential growth in surrounding areas or other areas in the country. Such projections may be simple extrapolations of recent historical trends and, as a result, may be too optimistic or pessimistic. If these county projections were added together, the total might differ considerably from any conceivable national forecast scenario; this is the result of each regional projection being generated independently without interactive procedures and without being integrated into a consistent national projection.

*Woods & Poole Economics, Inc. is a small, independent corporation that specializes in long-term county economic and demographic projections. Woods & Poole's database for every county in the U.S. contains projections through 2060 for more than 900 variables.*

The methods used by Woods & Poole to generate the county projections proceed in four stages. First, forecasts to 2060 of total United States personal income, earnings by industry, employment by industry, population, inflation, and other variables are made. Second, the country is divided into 179 Economic Areas (EAs) as defined by the U.S. Department of Commerce, Bureau of Economic Analysis (BEA). The EAs are aggregates of contiguous counties that attempt to measure cohesive economic regions in the United States (a list of all EAs and their component counties can be found in Appendix 6 following this chapter); in the 2024 Woods & Poole model, EA definitions released by the BEA in May 2007 are used. For each EA, a projection is made for employment, using an "export-base" approach; in some cases the "export-base" approach is modified using historical change in employment by sector to forecast employment; employment projections are sometimes adjusted to reflect the results of individual EA models or exogenous information and assumptions about the EA economy. The employment projection for each EA is then used to estimate earnings in each EA. Employment, and historical change, are the principal explanatory variables used to estimate population and number of households in each EA.

The third stage is to project population by age, sex, and race for each EA on the basis of projected net migration rates. For stages two and three, the U.S. projection is the control total for the EA projections. The fourth stage replicates stages two and three except that it is performed at the county level, using the EAs as the control total for the county projections.

### **The "Export-Base" Approach**

The economic projection techniques used by Woods & Poole to generate the employment, earnings, and income estimates for each county in the United States generally follow a standard economic "export-base" approach. This relatively simple approach to regional employment projections is one that has been used by a number of researchers (see [5] and [9]). Although this approach has been criticized by several empirical studies (e.g., [8]), given the availability of regional data it remains one of the most feasible theoretical methodologies.

Certain industrial sectors at the regional level are considered "basic." This means that these sectors produce output that is not consumed locally but is "exported" out of the region for national or international consumption. This assumption allows these sectors to be linked closely to the national economy, and hence follow national trends in productivity and output growth. Normally, the "basic" sectors are mining, agriculture, manufacturing, and the Federal government. In contrast, "non-basic" sectors are those such as retail trade, utilities, real estate, and construction, the output of which is usually consumed locally. The growth of the "non-basic" sectors depends largely on the growth of the "basic" sectors that form the basis of the region's economy.

Intuitively, this approach has great appeal and there are numerous examples that seem to support the "export-base" theory. Automobile production in Detroit, for instance, is obviously much more sensitive to national and international price and demand for transportation equipment than to local demand. In Texas, oil and natural gas exploration and

production are tied closely to the worldwide demand and supply of petroleum resources and not tied primarily to energy consumption in Texas.

Although the theory is appealing, some shortcomings do exist in the "export-base" approach. For example, some "basic" commodities produced locally are consumed locally. Producers of durable equipment used in other manufacturing processes are often affected not by the national demand for their product but by the regional demand. Machine tool makers that supply the local automobile industry in Detroit will prosper to the extent Detroit's automobile producers prosper. In Houston, the strength of the local oil industry will affect the demand and production of equipment for oil and natural gas production and exploration. In both of these instances, some durable manufacturing industries exist to serve local, not national, markets.

However, despite the shortcomings, the availability of relatively clean data for sub-national geographic areas makes the "export-base" approach very useful. The analytical framework for projections using the "export-base" approach entails estimating either demand equations or calculating historical growth rate differentials for output by sector. The principal explanatory variable, or the comparative data series for growth rate differentials, is the national demand for the output of that sector. Employment-by-sector data are often used as a surrogate variable since county output by sector data are not available; employment-by-sector data are used by Woods & Poole. Earnings projections are then obtained by using earnings per employee data either estimated as part of the model or imposed exogenously on the system. The complementary relationship could also be estimated, i.e., using an earnings forecast to derive employment based on earnings per employee data; this procedure has been used previously in some Woods & Poole regional models.

Woods & Poole uses a modification of the "export-base" approach to account for regional variants to normal "basic"/"non-basic" industry definitions. Some "non-basic" sectors can be more appropriately modeled as "basic" sectors in certain regional economies. The finance and insurance or the wholesale trade sectors in New York City, for example, and the accommodation and food services sector in Las Vegas, are cases in which traditionally "non-basic" sectors are really "basic." New York is a worldwide financial and trade center and thus "exports" these services outside of the region; Las Vegas, as a vacation and entertainment center, similarly "exports" the output of its accommodation and food services sector to other parts of the country. Activity in these sectors, in these specific geographic areas, is therefore linked more closely to the performance of these same sectors in the surrounding regions and the nation as a whole than to the other "basic" industries in the region.

A list of Economic Areas that have traditionally "non-basic" sectors modeled as "basic" sectors is presented in Table 1. Areas with "non-basic" sectors modeled as "basic" are those areas with a proportion of "non-basic" sector employment relative to total employment greater than 1.5 standard deviations above the national mean for a specific sector. With the exception of two sectors that are always considered "non-basic," construction and state and local government, all "non-basic" sectors are evaluated for each EA using this method (see [5]).

In addition to following an "export-base" approach, Woods & Poole uses exogenous information, historical EA employment change, and assumptions about EA economic growth, as well as some individual EA models to make projections. Although almost all EAs are not modeled individually, since most are assumed to fit a normative structure, certain EAs that have interesting features can be modeled separately. Areas that have had rapid growth (such as Houston) or severe economic recessions as in some heavy-industry EAs (such as Cleveland) lend themselves to individual models. These regional economies, at least in part, can be modeled separately. This is a simple "bottom-up" approach that can take into account the idiosyncrasies of individual areas (see [2], [3], [7]).

An example of a "bottom-up" approach is shown with the equations for Cleveland, Houston, Sioux City IA, and Seattle, presented in Table 2. The seven equations shown in Table 2 were not used in the 2024 Woods & Poole

projections. The Cleveland-Akron-Elyria OH-PA Economic Area is defined as Ashland, Ashtabula, Carroll, Columbiana, Crawford, Cuyahoga, Erie, Geauga, Harrison, Holmes, Huron, Lake, Lorain, Mahoning, Medina, Portage, Richland, Stark, Summit, Trumbull, Tuscarawas, and Wayne counties in Ohio; and Mercer county in Pennsylvania. The Houston-Baytown-Huntsville TX Economic Area is defined as Angelina, Austin, Brazoria, Brazos, Burleson, Calhoun, Chambers, Colorado, DeWitt, Fayette, Fort Bend, Galveston, Goliad, Grimes, Harris, Houston, Jackson, Lavaca, Leon, Liberty, Madison, Matagorda, Montgomery, Nacogdoches, Polk, Robertson, Sabine, San Augustine, San Jacinto, Shelby, Trinity, Victoria, Walker, Waller, Washington, and Wharton counties. The Sioux City-Vermillion IA-NE-SD Economic Area is defined as Monona, O'Brien, Osceola, Plymouth, Sioux, and Woodbury counties in Iowa; Antelope, Boyd, Cedar, Dakota, Dixon, Holt, Knox, Madison, Pierce, Stanton, Thurston, Wayne, and Wheeler counties in Nebraska; and Bon Homme, Clay, Union and Yankton counties in South Dakota. The Seattle-Tacoma-Olympia WA Economic Area is defined as Clallam, Grays Harbor, Island, Jefferson, King, Kitsap, Kittitas, Lewis, Mason, Pacific, Pierce, San Juan, Skagit, Snohomish, Thurston, and Whatcom counties in Washington.

The following discussion of these equations illustrates some of the logic and assumptions that go into the Woods & Poole model. The historical data used in the model equations are defined and explained in a later section of this chapter. Figure 1 illustrates the degree of fit for several of the equations.

In equation (1) Cleveland manufacturing employment is a function of total U.S. manufacturing employment, the wages of Cleveland manufacturing workers relative to manufacturing workers for the U.S. as a whole, and a lagged dependent variable. All the coefficients are significant at a 95% confidence level, and together clearly explain historical manufacturing in Cleveland. It is interesting to note that the coefficient for relative wages is significant and negative. The ratio of earnings per manufacturing worker in Cleveland to U.S. earnings per manufacturing worker (this is the definition of relative wages) historically has always been greater than one, with a mean of 1.05 for the period 1970 to 2022. Relatively high wages explain, in part, the decline in manufacturing employment in areas such as Cleveland. Faced with relatively high wages, manufacturers have an incentive to increase the productivity of existing plants and save labor, move plants to other areas where wages are lower, or close plants permanently because of competition from other facilities able to produce the same goods more efficiently.

Equation (2) explains Houston manufacturing employment as a function of total U.S. mining earnings, a dummy variable for the years 1982 to 1989 and 2000 to 2022, U.S. manufacturing earnings, and a lagged dependent variable. U.S. mining earnings measures the expansion of domestic mining activity as oil and natural gas prices increased during the 1970s. Historically the largest manufacturing sectors in the Houston Economic Area were the production of equipment used in the exploration and extraction of petroleum resources and the production of refined fuels and chemicals from oil; both of these manufacturing sectors were dependent on the output of the mining sector for the U.S. as a whole. As the price of oil increased during the 1970s, demand for new extraction and exploration increased. Similarly, as

		[17.04]	[105.24]	[3.47]	[6.83]

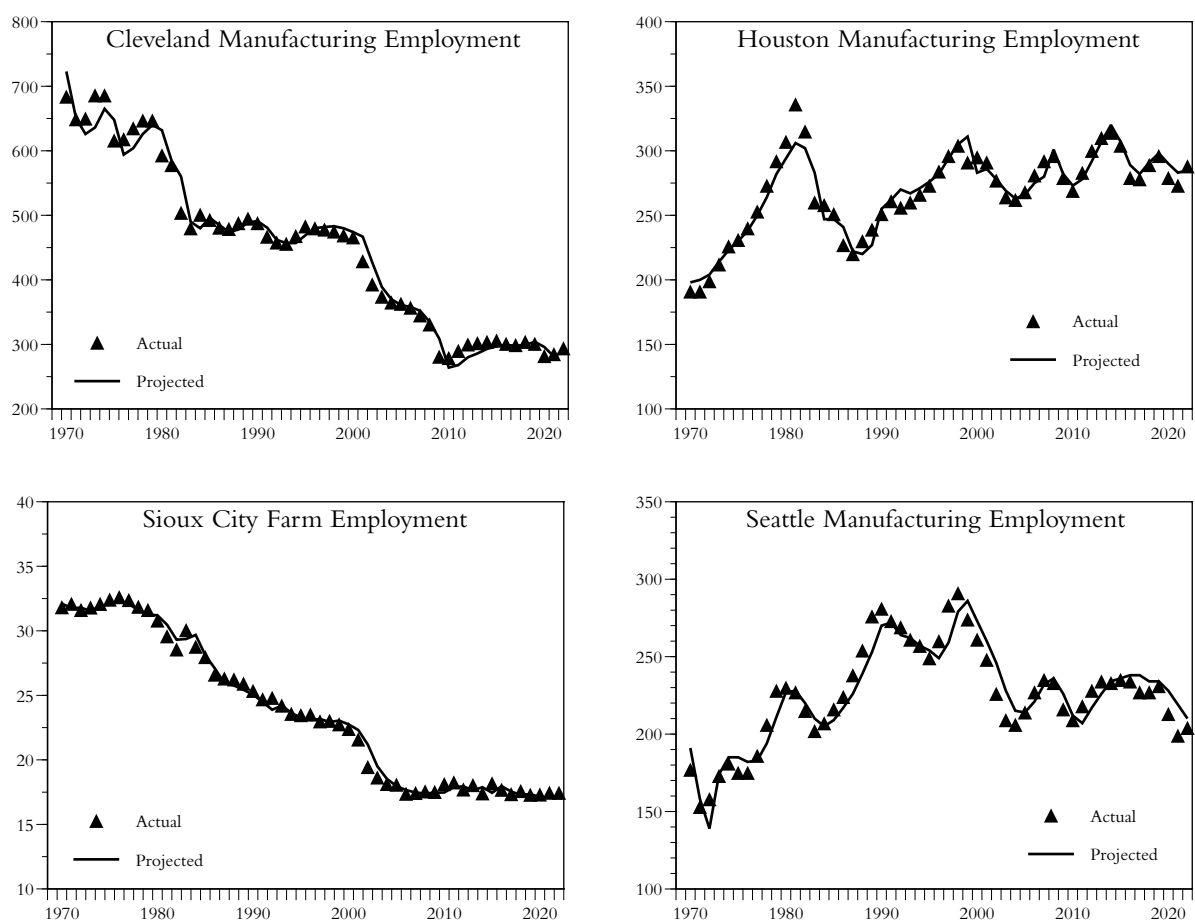

**Variables:**

DA = dummy variable	SA = Seattle manufacturing employment
HA = Houston manufacturing employment	SB = Seattle non-basic employment
HB = Houston mining employment	SC = Seattle population
XA = Sioux City farm employment	UA = U.S. manufacturing employment
XB = Sioux City non-basic employment	UB = U.S. mining earnings
XC = Sioux City basic employment	UC = U.S. farm employment
CA = Cleveland manufacturing employment	UD = U.S. unemployment rate
CB = Cleveland relative manufacturing wages	UE = U.S. manufacturing earnings

prices fell in the 1980s, demand for new exploration waned. Both of these phenomena have affected Houston's manufacturing employment base.

Equation (3) measures Houston mining employment as a function of U.S. mining earnings and the dependent variable lagged one year. Mining employment in Houston, another "basic" sector, depends on total demand for domestic mining output. As the price of oil rises, marginal U.S. reserves—which are relatively more expensive to produce or refine—become competitive, and Houston (and U.S.) production increases. In addition, increased mining revenues allow more capital to be used in the production of oil when prices are high. When prices are low, Houston (and U.S.) production declines, and imports generally rise.

In equation (4) Sioux City IA farm employment is a function of U.S. farm employment, the dependent variable lagged one year, and an intercept term. Farming, the largest "basic" sector in Sioux City, has experienced significant employment declines in recent years. Sioux City farm employment is related to U.S. farm employment in this equation because the reasons for job losses in Sioux City are related to nationwide changes in agriculture. In every decade since 1900, farm employment in the U.S. has declined while farm productivity has increased. The experience of Sioux City is like that of most other farming areas: employment has declined as output has remained steady or increased. The national projections of agricultural productivity growth are important to expected farm employment in Sioux City.

**Figure 1. Employment Projections for Selected Economic Areas, 1970-2022**

**Note:** Employment in thousands of jobs; historical data, 1970-2022, from U.S. Department of Commerce; projected data, 1970-2022, from Woods & Poole Economics, Inc.

Equation (5) explains Sioux City's "non-basic" employment as a function of Sioux City "basic" employment and the dependent variable lagged one year. This equation illustrates the relationship between "basic" employment losses and subsequent "non-basic" employment losses. As "basic" employment declined in Sioux City, so did "non-basic" employment.

In equation (6) Seattle manufacturing employment is a function of an intercept term, the U.S. unemployment rate, a dummy variable for 1970 to 1972, and a lagged dependent variable. The largest manufacturing sectors in Seattle—aircraft, lumber, and wood products – are sensitive to U.S. business cycles. U.S. business cycles are measured by the civilian unemployment rate, which has a negative coefficient in equation (6). The negative coefficient of the dummy variable for 1970 to 1972 adjusts the specification of the equation for the severe regional recession during that time.

Equation (7) explains Seattle "non-basic" employment as a function of an intercept term, Seattle population, a dummy variable for the 1970-72 regional recession, and the U.S. unemployment rate. The unemployment rate measures the sensitivity of Seattle employment to U.S. business cycles. "Non-basic" employment is also a function of the population of the region: as the population of Seattle has grown, the demand for "non-basic" sector employment has also increased. It is interesting that population is contemporaneous with the dependent variable, "non-basic" employment, in equation (7). In rapidly growing areas, such as Seattle, population increases have an immediate effect on employment growth in "non-basic" industries. In some very rapidly growing areas of Texas in the late 1970s, population growth actually preceded "non-basic" employment growth. This is analogous to the development of "boom towns" of the Old West: the economy catches up to the demand created by the new population growth, and

new businesses locate in fast-growing areas. However, in those areas losing population, "non-basic" employment does not decline in step with population losses. Many "non-basic" businesses in a declining area will hang on as long as possible in anticipation of an upturn in the region's economy. This reflects the local nature of most "non-basic" businesses, and the desire of firms to protect their capital investment in a specific site.

### The Demographic Model

The demographic portion of the regional model follows a traditional cohort-component analysis based on calculated fertility and mortality in each county or EA. The "demand" for total population is estimated from the economic model: if the demand for labor in a particular county or EA is forecast to rise, then either the labor force participation rate is assumed to rise, or population in-migration is assumed to be positive. The inverse is assumed for counties and EAs with projected declines in employment. Therefore, future EA and county migration patterns for population by age, sex, and race are based on employment opportunities and historical population growth in the geography. Working-age individuals and their families are assumed to migrate, at least in part, in response to employment opportunities (see [1], [4], and [6].) For population aged 65 and over and for college or military-aged population, migration patterns over the forecast period are generally based on historical net migration and not economic conditions. The integration of economic and demographic regional analysis is a significant strength of the Woods & Poole approach.

The age, sex, and race distribution of the population is projected by aging the population by single year of age by sex and by race for each year through 2060, based on county or EA specific mortality, fertility, and migration rates estimated from historical data. In the Woods & Poole model, projected net mortality and migration are estimated based on the historical net change in population by age, race, and sex for a particular county or EA. Similarly, projected net births and migration of age-zero population by race are estimated based on the historical change in age-zero population by race per female population age 15 to 44 by race for a particular county or EA.

The United States population by age, sex, and race projections, 2023 to 2060, are based on Bureau of the Census population estimates for 1990 through 2009, intercensal estimates of population 2010 to 2019 based Census postcensal estimates and Census Vintage 2022 estimates base, and Bureau of the Census population estimates 2020 to 2022 (Vintage 2022, which includes adjusted data from the 2020 Census). Woods & Poole forecasts the U.S. estimates with a cohort-component model based on the year-to-year change in U.S. population by single year of age, race, and sex. Forecast fertility, mortality, and international migration are estimated based on historical U.S. population data by single year of age, sex, and race. Woods & Poole produces only a "middle" U.S. population forecast; this forecast is similar to the Census "middle" forecast scenario for U.S. population. The U.S. population by age, sex, and race forecast is the control total for the EA projections. Each EA projection serves as the control total for the county projections.

*In the Woods & Poole model population migration is a function of employment opportunities and historical population change.*

*The 2024 Woods & Poole database includes Census Bureau Vintage 2023 total population data for 2020 through 2023 based on data additional from the 2020 Census.*

The 2024 Woods & Poole U.S. population projections, 2023 to 2060, are estimated with historical fertility and net migration 2010 through 2020—based on U.S. Census postcensal estimates, Vintage 2020.

### The Accuracy of the Projections

Unlike other sciences, economics and demographics cannot rely on experimentation to test theories and verify hypotheses. Rather, historical data are analyzed, and theories are developed that explain the historical data. The resulting models and assumptions are then used to make a projection. Woods & Poole projections, like all economic and demographic projections, utilize this approach: analyzing historical data to make estimates of future data. There are, of course, inherent limitations to projections, and the Woods & Poole projections should never be interpreted as a prediction of the future. Future data may differ significantly from Woods & Poole projections, and Woods & Poole does not guarantee the accuracy of the projections. In all Woods & Poole publications, the word "forecast" is used as a synonym for "projection" and refers to Woods & Poole estimated data for any year from 2023 to 2060.

*Comparing previous Woods & Poole projections to historical data does not give any indication of the accuracy of current or future projections.*

One key limitation to all projections, and Woods & Poole projections in particular, is that the future is never known with any certainty. The model and assumptions on which the projections are based may not accurately reflect future events. In addition, there is always the possibility of an unanticipated shock to the economy, or of some other event that was not foreseen from historical data. For instance, a local government may enact a new industrial policy that has an unexpected, beneficial effect on employment growth. Or an abrupt economic change, although anticipated, may occur with much greater intensity or in a shorter time period than expected. For example, the projection may assume an increase in the price of a commodity (such as oil) over a five-year period, but an embargo may raise the price to that level in only one year. In addition, the projections may not be accurate because historical data are revised; or because the projection models and assumptions do not accurately reflect demographic or economic phenomena; or because the projections contain errors; or because the smooth growth path of the long-term projections inaccurately reflects important variance in economic or demographic growth for particular regions; or because assumptions about national or regional growth, upon which the projections are based, turn out to be incorrect. In addition, there are many other types of economic and demographic events that could create outcomes far different from Woods & Poole's projections.

Another limitation results from doing forecasts for small geographic areas for small data series. Statistically, models are more reliable the larger the area and/or the series being studied. Small area forecasts, such as county population for White men age 84, are subject to greater error because of the small sample size. This error can be reduced, although never eliminated, by constraining the small area forecasts to the forecast totals for a larger area or series; this is the method used by Woods & Poole.

One way to evaluate the effectiveness of a projection method is to compare previous projections to current data. Although such a comparison does not indicate the potential accuracy of current or future projections, it can be useful to measure the magnitude of error of previous projections.

**Table 3. Percent Errors of Previous Woods & Poole Projections**

		Employment			Personal Income			Population		
		AAPE	APE	SD	AAPE	APE	SD	AAPE	APE	SD
<b>United States</b>										
1-year projection	(n=36)	1.3%	-0.2%	2.1%	3.6%	-3.3%	2.7%	0.5%	-0.3%	0.8%

**Note:** This table shows the Average Absolute Percent Error (AAPE), the Average Percent Error (APE), and the Standard Deviation of the APE (SD) for Woods & Poole's one-year to ten-year projections of employment, personal income, and population for the U.S., states, Metropolitan Areas (MSAs), and counties. This table represents all Woods & Poole projections done since 1984. AAPEs are the average absolute value of the percent difference of projected data to actual historical data as defined in the 2024 Woods & Poole model; APEs are the average value of the percent difference of projected data to actual historical data; and the SDs are for the APEs. The data in this table cover all Woods & Poole projections. The AAPEs and APEs shown for each projection period are the average of all Woods & Poole projections for that projection period: there were 36 one-year projections (therefore, the one-year projection AAPE and APE for county employment were calculated based on  $n=36 \times 3113=112,068$  observations); 35 two-year projections; 34 three-year projections; 33 four-year projections; 32 five-year projections; 31 six-year projections; 30 seven-year projections; 29 eight-year projections; 28 nine-year projections; and 27 ten-year projections. AAPEs and APEs are based on geographic area definitions from the 2024 Woods & Poole model. AAPEs and APEs are calculated based on historical data as defined in the 2024 Woods & Poole model. AAPEs and APEs for employment are based on total employment by place of work (numbers of jobs). AAPEs and APEs for total personal income are based on current dollar personal income, unadjusted for inflation. AAPEs and APEs for population are based on residential population. The percent errors in this table are not an indicator of the accuracy of current or future Woods & Poole projections.

Table 3 illustrates how well Woods & Poole projected employment, population, and personal income over a one-year to ten-year forecast horizon for various geographies.

One statistic used to evaluate the projections is the Average Absolute Percent Error (AAPE), which is the average of the absolute values of the percent difference from the projected data to the actual data. The lower the AAPE, the more accurate the projection (e.g., Woods & Poole's 3-year population projections have been accurate within  $\pm 1.6\%$  for states and  $\pm 3.5\%$  for counties.) All Woods & Poole projections are evaluated for each projection horizon; thus, the AAPE for one-year projections is calculated based on all Woods & Poole one-year projections (there have been 36 one-year projections and 27 ten-year projections). Changes to historical data are not adjusted when calculating the AAPEs. Thus, if a projection was made using historical data that were subsequently revised, the AAPE is calculated

based on the revised data, probably inflating the AAPE, particularly for short-term projections. For example, projections of 1993 employment done in 1984 were made using a different definition of employment; in the 1984 forecast, U.S. total employment in 1980 was estimated to be 106.4 million jobs. Since then, however, the definition of employment has been revised several times by the Department of Commerce and now U.S. total employment in 1980 is estimated to have been 114.0 million jobs. Consequently, the AAPEs are calculated based on revised data so they incorporate not only forecast error but definitional changes as well, probably inflating the AAPEs.

The longer the forecast horizon, the larger the AAPE. Thus for all Metropolitan Statistical Areas (MSAs), one-year population projections have been accurate within  $\pm 1.2\%$  compared to  $\pm 5.4\%$  for the 10-year projection. In addition, population projections, the most stable series and the data least subject to historical revision, have the lowest AAPEs.

Personal income has the highest AAPE for all geographies because, in addition to projecting the level of personal income, there is an implicit price inflation forecast built into the income projections. In the early 1980s after a period of rapid inflation, the Woods & Poole personal income projections had relatively high AAPEs (the ten-year personal income forecast had an AAPE of  $\pm 14.3\%$  for counties). As inflation mitigated in the 1980s, the AAPEs for personal income dropped sharply; the five-year AAPE dropped to  $\pm 10.0\%$  for counties.

Generally, the smaller the geography, the larger the AAPEs for all variables. For all counties, the AAPE for eight-year population projections was  $\pm 6.9\%$ . However, for counties with population under 50,000 in 2010, the eight-year projection AAPE was  $\pm 7.4\%$ . Similarly, for larger geographies, the AAPEs are usually lower. The AAPE for counties with 2010 population between 50,000 and 100,000 was  $\pm 5.9\%$ ; for counties with population over 100,000 the AAPE was  $\pm 5.6\%$ . AAPEs for smaller variables tend to be much higher than AAPEs for larger variables. Thus, the AAPE for retail trade employment would probably be much higher than the AAPE for total employment, conditional on geographic area size and forecast horizon.

The accuracy of Woods & Poole's projections has been comparable to the accuracy of other regional forecasting programs. Figure 2 compares Woods & Poole's projections to Department of Commerce Bureau of Economic Analysis (BEA) and Census Bureau projections over comparable forecast horizons. The Woods & Poole eight-year forecast AAPEs for states for the year 1990 for employment and personal income were slightly below the BEA AAPEs, and slightly above the BEA AAPEs for population. Similarly, the Woods & Poole one-year to five-year population projections AAPE for states were slightly below the Census AAPEs.

Other statistics are sometimes used to evaluate forecasts. The AAPE is most commonly used as a measure of accuracy for projections when the units being compared are of different sizes (e.g., county population, the base of which can range from 100 for Loving, TX to eight million for Los Angeles, CA). It has the advantage of being able to compare units of different sizes equally. In some models, the root mean squared error (RMSE) is used to measure accuracy. The RMSE has the disadvantage of giving

**Figure 2. Woods & Poole AAPEs Compared to BEA and Census**

#### BEA 8-Year Forecast for 1990

#### 8-Year State Forecast for 1990

Employment AAPE	
BEA	10.76%
Woods & Poole	9.45%
Population AAPE	
BEA	4.07%
Woods & Poole	5.06%
Personal Income AAPE	
BEA	10.72%
Woods & Poole	10.05%

#### State Population AAPEs

1-Year forecast	
Census	1.58%
Woods & Poole	0.93%
2-Year forecast	
Census	1.86%
Woods & Poole	1.24%
3-Year forecast	
Census	2.05%
Woods & Poole	1.63%
4-Year forecast	
Census	2.39%
Woods & Poole	1.94%
5-Year forecast	
Census	2.56%
Woods & Poole	2.33%

**Note:** BEA 8-year forecast AAPEs for 1990 were calculated from data in 1985 *OBERs BEA Regional Projections*, Vol. 1; Woods & Poole 8-year forecast AAPEs for 1990 were calculated from the 1986 Regional Model; Census forecast AAPEs were calculated from all 1-year through 5-year projections contained in *Projections of the Population of States by Age, Sex, and Race: 1988 to 2010* (CPR, P-25, No. 1017) and *Projections of the Population of States by Age, Sex, and Race: 1989 to 2010* (CPR, P-25, No. 1053).

modest errors for large units a greater weight than modest errors for small units (i.e., an error of 10,000 on a base of two million is given greater weight than an error of 1,000 on a base of 20,000, just the opposite of the AAPE).

Another useful statistic in evaluating forecasts is the simple average of all the percent errors: the Average Percent Error (APE). This measures the bias of the forecast. In Woods & Poole projections, employment for counties has usually had an upward bias (the APE has been positive). The APE for all ten-year Woods & Poole county employment projections is +3.8%, with a standard deviation of 18.2% (see Table 3). Similarly, the county population projections have always had an upward bias (the APE has been positive). The APE for all ten-year Woods & Poole county population projections is +2.2%, with a standard deviation of 14.6%.

### Historical Data

Much of the historical economic data in the Woods & Poole regional databases are obtained from the Bureau of Economic Analysis (BEA) of the Department of Commerce. The historical data from the BEA include county-level data for each year from 1969 through 2022 for employment and earnings by one-digit Standard Industrial Classification (SIC) code (1969 to 2000), by one-digit North American Industry Classification System (NAICS) code (2001 to 2022), and personal income by source of income. Other sources of data include the 1970, 1980, 1990, 2000, 2010, and 2020 Censuses and postcensal estimates for population and household data, and the quinquennial Census of Retail Trade for retail sales data. Woods & Poole generally accepts the government data as given unless indicated otherwise in this chapter. The discussion of the historical data used by Woods & Poole which follows is not intended to be a complete explanation of the historical data; the user should consult the government sources of the historical data for a complete explanation. Some of the sources of government data used by Woods & Poole have technical explanations of how the historical data are collected, how the data can be used, and limitations to the data; the documentation may contain important information on the applicability of the data for particular applications, and should be reviewed by users of the historical data; the documentation can be obtained from the U.S. Dept. of Commerce, the Government Printing Office or many public libraries. All data for the years 2023–2060 are projected by Woods & Poole.

*Historical data used by Woods & Poole are subject to significant revisions.*

*Historical data in the Woods & Poole database are revised each year.*

Historical data are subject to revision from time to time. Historical employment and income data from the Bureau of Economic Analysis (BEA) are revised on a regular basis. When using the historical data, it is important to use the current revision and not combine these data with previous versions since there may be definitional changes in the data.

### Historical Basis for the 2024 Projections

The Woods & Poole 2024 projections are based on annual historical data from 1969 to 2022. In the 2024 projections historical time series data through 2019 and for the year 2022 are used for the forecasts. Data for 2020 and 2021 are not used in the time series because of the impact of the COVID-19 pandemic.

The historical basis for the county population forecasts by age, sex, and race are county data 1990 to 2009 based on Census intercensal estimates, 2010 to 2019 are Woods & Poole intercensal estimates of postcensal estimates and Census Vintage 2022 April 1 2020 estimates base data, and 2020 to 2022 are from Census Bureau Vintage 2022 postcensal estimates. Woods & Poole 2010 to 2019 intercensals are used in the 2024 database because the Census Bureau has not produced intercensal estimates based.

### Gross Domestic Product

Gross Domestic Product (GDP) by region data are historical for the United States total, regions, and states for the years 1969 to 2021, and for counties for the years 2001 to 2021, from the Bureau of Economic Analysis (BEA). In the 2024 database county and state GDP historical data for 2022 are estimated by Woods & Poole based on BEA data for 2001 to 2021 and revised BEA data for 2017 to 2022. BEA only released partially updated county and state GDP data and only for a portion of the time series (2017 to 2022) which is an insufficient time series for forecasting.

All county, and metropolitan area, historical GDP data, 1969–2000, are estimated by Woods & Poole by allocating state GDP in a particular year to counties within the state based on the proportion of total state earnings of employees originating in a particular county. County GDP estimates are constrained to state totals for the years 1969–2000. All GDP data are establishment based. GDP is also called Gross Regional Product (GRP) in the Woods & Poole database.

*County Gross Domestic Product data for the years 2001 to 2021 from the BEA are included in the 2024 Woods & Poole database. Historical data for 2022 are estimated.*

### Employment

The employment data in the Woods & Poole database are a complete measure of the number of full- and part-time jobs by place of work. Historical data, 1969–2022, are from the U.S. Department of Commerce, Bureau of Economic Analysis, released in November 2023. The employment data include wage and salary workers, proprietors, private household employees, and miscellaneous workers. Wage and salary employment data are based on an establishment survey in which employers are asked the number of full- and part-time workers at a given establishment. Because part-time workers are included, a person holding two part-time jobs would be counted twice. Also, since the wage and salary employment data are based on an establishment survey, jobs are counted by place of work and not place of residence of the worker; thus, a job in the New York Metropolitan Area is counted in the New York Metropolitan Area regardless of where the worker lives.

Data on proprietors include farm and non-farm proprietors by sector. Proprietors include not only those people who devote the majority of their time to their proprietorship, but people who devote any time at all to a proprietorship. Thus, a person who has a full-time wage and salary job and on nights and weekends runs a small business legally defined as a proprietorship would be counted twice. The employment data therefore include full- and part-time proprietors.

Private household employment data include persons employed by a household on the premises, such as full-time baby-sitters, housekeepers, gardeners, and butlers. Miscellaneous employment data include judges and all elected

*Employment data are historical for the years 1969–2022 and projected for the years 2023–2060. Total employment and private non-farm employment data by NAICS industries are estimated for the years 1969–2000.*

*Employment data in the Woods & Poole database are usually much higher than BLS employment data because Woods & Poole includes proprietors and military employment.*

officials, persons working only on commission in sectors such as real estate and insurance, students employed by the colleges or universities in which they are enrolled, and unincorporated subcontractors in sectors such as construction.

The employment data used by Woods & Poole comprise the most complete definition of the number of jobs by county. Woods & Poole data may be higher than that from other sources because they measure more kinds of employment. There are three other commonly used government sources for employment data: the Bureau of Labor Statistics (BLS), the Bureau of the Census, and the National Income and Product Accounts (NIPA). These sources of employment data differ from the data used by Woods & Poole.

**The BLS establishment data** are generally much lower than the Woods & Poole data because agricultural workers, the military, proprietors, households, and miscellaneous employment are not included; the exclusion of proprietors from the BLS data is the most significant difference. **Data from the Census** (and some survey data from the BLS) are based on employment by place of residence and differ fundamentally in concept from the Woods & Poole employment data by place of work; Census employment data are generally lower than Woods & Poole data, but not always. Since Census data are based on a household survey, persons holding two jobs would be counted only once, and, therefore, the data would be lower than that from Woods & Poole. However, Census survey data for counties that have a large number of commuters and relatively few jobs within the county could yield employment data higher than Woods & Poole. Employment data in the **National Income and Product Accounts** are close to Woods & Poole data, except that part-time proprietors and certain miscellaneous employees are excluded; therefore, these data are usually lower.

### Employment by Sector

The employment data are by two-digit North American Industry Classification System (NAICS) industry. The two-digit industries are defined in the 2002 North American Industry Classification System Manual. The employment data in the 2023 Woods & Poole database are no longer based on the Standard Industrial Classification (SIC) system definitions. For the years 1969–2000 BEA provided employment industry data by SIC rather than by NAICS; Woods & Poole has estimated the NAICS industry data for 1969–2000 from the BEA SIC 1969–2000 employment industry data and the NAICS employment industry data for the years 2001–2022.

As a rule, employment is classified in a given industry depending on the primary activity of the establishment. For example, employees of a large oil company are classified in many different sectors depending on the specific establishment in which they worked, even though the company as a whole would be considered a mining company: employees at a refinery are in manufacturing, employees at the company headquarters are in management, pipeline operators are in transportation, and oil field workers are in mining. If a given establishment is engaged in activities in different sectors, all employees are classified according to the primary activity of the establishment regardless of their actual occupations. Thus, a secretary for a trucking company is a transportation worker and an accountant at a small plumbing company is a construction worker. The main exception to this rule is the

classification of government workers in the Woods & Poole database: all government employees are classified in Federal civilian, Federal military, or state and local government employment, regardless of the usual classification of the establishment in which they work. Definitions for each sector, based on NAICS industries, in the Woods & Poole database are as follows:

**Farming** includes establishments such as farms, orchards, greenhouses, and nurseries primarily engaged in the production of crops, plants, vines, trees (excluding forestry operations), and specialties such as Christmas trees, sod, bulbs, and flower seed. It also includes establishments such as ranches, dairies, feedlots, egg production facilities, and poultry hatcheries primarily engaged in the keeping, grazing, or feeding of cattle, hogs, sheep, goats, poultry of all kinds, and special animals such as horses, bees, pets, fish farming, and animals raised for fur.

**Forestry, fishing, related activities, and other** includes establishments primarily engaged in harvesting timber, and harvesting fish and other animals from their natural habitats. The sector also includes agricultural support establishments that perform one or more activities associated with farm operation, such as soil preparation, planting, harvesting, and management, on a contract or fee basis. Excluded are establishments primarily engaged in agricultural research and establishments primarily engaged in administering programs for regulating and conserving land, mineral, wildlife, and forest use. Other consists of jobs held by U.S. residents who are employed by international organizations and by foreign embassies and consulates in the United States.

**Mining** includes establishments that extract naturally occurring mineral solids (e.g., coal and ores), liquid minerals (e.g., crude petroleum), and gases (e.g. natural gas.) Mining includes quarrying, well operations, beneficiating (e.g., crushing, screening, washing, and flotation), and other preparation customarily performed at the mine site, or as a part of mining activity..

**Utilities** includes establishments engaged in the provision of electric power, natural gas, steam supply, water supply, and sewage removal. Utilities include electric power generation, electric power transmission, electric power distribution, natural gas distribution, steam supply provision, steam supply distribution, water treatment, water distribution, sewage collection, sewage treatment, and disposal of waste through sewer systems and sewage treatment facilities. Excluded from this sector are establishments primarily engaged in waste management services that collect, treat, and dispose of waste materials but do not use sewer systems or sewage treatment facilities. Also excluded from this sector are federal or state or local government-operated establishments.

**Construction** includes establishments primarily engaged in building new structures and roads, alterations, additions, reconstruction, installations, and repairs. It also includes general contractors engaged in building residential and nonresidential structures; contractors engaged in heavy construction, such as bridges, roads, tunnels, and pipelines; and special trade contracting, such as plumbing, electrical work, masonry, and carpentry. Construction includes establishments primarily engaged in the preparation of sites for new construction, including demolition, and establishments primarily engaged in subdividing land for sale as building sites. Construction work done may include new work, additions, alterations, or maintenance and repairs.

***Government employees are classified in Federal civilian, Federal military, or state and local government employment, regardless of the NAICS classification of the establishment in which they work.***

***"Other" includes jobs of U.S. residents working for international organizations.***

***Utilities employment.***

***Manufacturing employment.***

***Manufacturing*** includes establishments engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. The assembling of component parts of manufactured products is considered manufacturing, except in cases where the component parts are associated with structures. Manufacturing establishments can be plants, factories, or mills as well as bakeries, candy stores, and custom tailors. Manufacturing establishments may either process materials or may contract with other establishments to process their materials for them. Broadly defined, manufacturing industries include the following: food processing, such as canning, baking, meat processing, and beverages; tobacco products; textile mill products, such as fabric, carpets and rugs; apparel; wood products, including logging, sawmills, prefabricated homes, and mobile homes; furniture; paper; printing; chemicals, such as plastics, paints, and drugs; petroleum refining; rubber and plastics; leather products; stone, clay, and glass; primary metals, such as steel, copper, aluminum, and including finished products such as wire, beams, and pipe; fabricated metals, such as cans, sheet metal, cutlery, and ordnance; industrial machinery, including computers, office equipment, and engines; electronics and electrical equipment; transportation equipment, such as cars, trucks, ships, and airplanes; instruments; and miscellaneous industries, such as jewelry, musical instruments, and toys. Excluded from manufacturing is the publishing of printed materials.

***Wholesale trade employment.***

***Wholesale trade*** includes establishments engaged in wholesaling merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The merchandise described in this sector includes the outputs of agriculture, mining, manufacturing, and certain information industries, such as publishing. Wholesale establishments are primarily engaged in selling merchandise to retailers, to industrial, commercial, institutional, farm, and construction contractors, to professional business users, or to other wholesalers or brokers. The merchandise sold by wholesalers includes all goods used by institutions, such as schools and hospitals, as well as virtually all goods sold at the retail level. Wholesalers can be merchant wholesalers who purchase goods from manufacturers or other wholesalers and sell them; sales branches of manufacturing, mining, or farm companies engaged in marketing the products of the company to retail establishments; or agents, merchandise or commodity brokers, and commission merchants.

***Retail trade*** includes establishments engaged in retailing merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. Retail trade also includes store retailers such as motor vehicle and parts dealers including automobile, motorcycle and boat dealers as well as tire and automobile parts stores; furniture and home furnishing stores; electronics and appliance stores; food and beverage stores, including supermarkets, convenience stores, butchers, and bakeries; health and personal care stores such as pharmacies and optical goods stores; gasoline stations; clothing and clothing accessory stores; sporting goods, hobby, book and music stores; department stores; and miscellaneous establishments, including office supply stores, mobile home dealers, thrift shops, florists, tobacco stores, and pet shops. In addition, retail trade includes nonstore retailers such as Internet and catalog sellers, as well as home delivery establishments such as heating oil dealers. Retail trade excludes eating and drinking places, including restaurants, bars, and take-out stands.

**Transportation and warehousing** includes industries providing transportation of passengers and cargo and warehousing and storage for goods. Establishments in these industries use transportation equipment or transportation related facilities as a productive asset. Transportation includes railroads, highway passenger transportation, trucking, shipping, air transportation, pipelines, and transportation services. Transportation also includes private postal services, and courier services, but excludes the U.S. Postal Service. Warehousing includes refrigerated storage and grain elevators.

**Information** includes establishments engaged in producing and distributing information and cultural products; providing the means to transmit or distribute these products as well as data or communications; and processing data. The main components of this sector are the publishing industries, including software publishing, and both traditional publishing and publishing exclusively on the Internet; the motion picture and sound recording industries; movie theaters; the broadcasting industries, including traditional broadcasting and those broadcasting exclusively over the Internet; the telecommunications industries; the industries known as Internet service providers and Web search portals; data processing industries; and the information services industries.

**Finance and insurance** includes establishments primarily either engaged in or facilitating financial transactions (e.g., transactions involving the creation, liquidation, or change in ownership of financial assets). Establishments include depository institutions, such as commercial banks, credit unions, savings and loans, and foreign banks; credit institutions; credit-card processing; investment companies; brokers and dealers in securities and commodity contracts; security and commodity exchanges; carriers of all types of insurance; and insurance agents and insurance brokers. Also included are central banks and monetary authorities charged with monetary control.

**Real estate and rental and leasing** includes establishments primarily engaged in renting, leasing, or otherwise allowing the use of tangible or intangible assets, and establishments providing related services. Real estate includes real estate leasing establishments, real estate agencies and brokerages, property management establishments, appraisals establishments, and escrow agencies. Rental and leasing includes car and truck rental, consumer goods rentals such as video stores and formal wear rental stores, and commercial equipment renting and leasing construction, transportation, office and farm equipment. Also included are establishments that lease nonfinancial and noncopyrighted intangible assets such as patents and trademarks.

**Professional and technical services** includes establishments that specialize in performing professional, scientific, and technical activities for others. These activities include legal advice and representation; accounting, bookkeeping, and payroll services; architectural, engineering, and specialized design services; computer services; consulting services; research services; advertising services; photographic services; translation and interpretation services; veterinary services; and other professional, scientific, and technical services. Excluded are establishments primarily engaged in providing office administrative services, such as financial planning, billing and record-keeping, personnel, and physical distribution and logistics.

**Transportation and warehousing employment.**

**Finance and insurance.**

**Professional and technical services.**

***Administrative and waste management.***

***Management of companies and enterprises*** includes bank holding establishments, other holding establishments, corporate management establishments as well as regional and subsidiary management establishments. Company or enterprise headquarters are included.

***Administrative and support and waste management and remediation services*** includes establishments engaged in office administration, hiring and placing of personnel, document preparation and similar clerical services, solicitation, collection, security and surveillance services, cleaning, and waste disposal services. Among many other establishments administrative includes call centers, tele-marketers, janitorial services, armored cars, temporary employment agencies, locksmiths, landscaping, and travel agencies. Waste management includes, among other establishments, solid waste collections and disposal, landfill operations and septic tank maintenance. Excluded from administrative and waste management are establishments involved in administering, overseeing, and managing other establishments of the company or enterprise. Also excluded are government establishments engaged in administering, overseeing, and managing governmental programs.

***Public education employment is counted in state and local government.***

***Educational services*** includes private elementary schools, junior colleges, colleges, universities, and professional schools. Also included are trade and vocational schools, business and secretarial schools, computer training services, language schools, fine arts training, sports training establishments, driving schools, flight schools and establishments that provide test preparation and tutoring. Educational services may be provided imparted in educational institutions, the workplace, or the home through correspondence, television, or other means. Public schools, including colleges and universities, are excluded from educational services.

***Local public hospitals are included in state and local government. Department of Veterans Affairs hospitals are included in Federal civilian government.***

***Health care and social assistance*** includes establishments providing health care and social assistance for individuals. Health care establishments include ambulatory care services (e.g., physician offices, dentists, specialists, HMOs, dialysis centers, blood banks, ambulance services), hospitals, and nursing and residential care facilities. Social assistance establishments include individual and family services (e.g., adoption agencies and youth centers), and community services such as food banks and homeless shelters. Excluded from this sector are aerobic classes and nonmedical diet and weight reducing centers. Also excluded are public hospitals and clinics.

***Arts, entertainment, and recreation*** includes establishments that are involved in producing, promoting, or participating in live performances, events, or exhibits intended for public viewing; establishments that preserve and exhibit objects and sites of historical, cultural, or educational interest; and establishments that operate facilities or provide services that enable patrons to participate in recreational activities or pursue amusement, hobby, and leisure-time interests. The sector includes establishments engaged in the performing arts, sporting events, museums, zoos, amusement and theme parks, golf courses, marinas, casinos, and gambling establishments. Excluded are movie theaters.

***Accommodation and food services*** includes hotels, motels, casino hotels, bed and breakfasts, campgrounds and recreational vehicle parks and other lodging places, as well as eating and drinking places, including restaurants, bars, and take-out stands. Also included are caterers and food service contractors.

**Other services, except public administration** includes churches and establishments engaged in equipment and machinery repairing, promoting or administering religious activities, grantmaking, advocacy, and establishments providing dry-cleaning and laundry services, personal-care services, death-care services, pet-care services, photofinishing services, temporary parking services, and dating services. Private households that engage in employing workers on or about the premises in activities primarily concerned with the operation of the household are also included in this sector.

**Federal civilian** includes all Federal government workers regardless of their establishment classification. Federal civilian employment includes executive offices and legislative bodies; courts; public order and safety; correctional institutions; taxation; administration and delivery of human resource programs, such as health, education, and public assistance services; housing and urban development programs; environmental programs; regulators, including air traffic controllers and public service commissions; the U.S. Postal Service; and other Federal government agencies.

**Federal military** includes the U.S. Air Force, U.S. Army, U.S. Coast Guard, U.S. Marine Corps, U.S. Merchant Marine, the National Guard, and the U.S. Navy. Personnel deployed abroad are counted in their home base or port. Reserve personnel who receive regular training are included. Civilians working on a military base are classified in the sector appropriate to their occupation.

**State and local government** is defined the same as Federal civilian, except that the activities are run by state and local governments. At the local level, this includes all public schools as well as police and fire departments; at the state level, it includes all public junior colleges, colleges, and universities.

## Earnings

Earnings of employees are the sum of wages and salaries, other labor income, and proprietors' income. Earnings also include personal contributions for social insurance, but do not include residence adjustment; each of these components is defined in the discussion of total personal income that follows. Historical earnings data, 1969-2022, are from the U.S. Department of Commerce, Bureau of Economic Analysis, released in November 2023. As with employment, earnings data are by place of work, so that the earnings of an employee who works in one county but resides in another are counted in the county where the job is located.

The two-digit NAICS sectors for earnings are defined the same as for employment in the preceding section. The two-digit industries are defined in the 2002 North American Industry Classification System Manual. As with employment data (see "Employment by Sector" section above), earnings data in the 2024 Woods & Poole database are no longer based on the Standard Industrial Classification (SIC) system definitions. For the years 1969-2000 BEA provided earnings industry data by SIC rather than by NAICS; Woods & Poole has estimated the NAICS industry data for 1969-2000 from the BEA SIC 1969-2000 earnings industry data and the NAICS earnings industry data for the years 2001-2022.

Earnings relates to workers' compensation and is not a measure of company earnings or profits. Earnings-by-sector data are sometimes used as

***Federal civilian includes all Federal workers regardless of their establishment classification.***

***Earnings data are historical for the years 1969-2022 and projected for the years 2023-2060. Total earnings and private non-farm earnings data by NAICS industries are estimated for the years 1969-2000.***

a surrogate variable for output by sector at the regional level where output data are not generally available.

### Personal Income

*Personal income data are historical for the years 1969–2022 and projected for the years 2023–2060. Earned income and total personal income data are estimated for the years 1969–2000.*

The historical data (1969–2022) for total personal income are from the U.S. Department of Commerce, Bureau of Economic Analysis. Total personal income is the income received by persons from all sources, that is, from participation in production, from both government and business transfer payments, and from government interest, which is treated like a transfer payment. Persons consist of individuals, nonprofit institutions serving individuals, private uninsured welfare funds, and private trust funds. Personal income is the sum of wages and salaries, other labor income, proprietors' income, rental income of persons, dividend income, personal interest income, and transfer payments less personal contributions for social insurance. Definitions for the sources of personal income follow:

**Wages and salaries** consists of monetary remuneration of employees, including compensation of corporate officers; commissions, tips, and bonuses; and receipts-in-kind that represent income to the recipients.

*Supplements to wages and salaries.*

**Supplements to wages and salaries** consists of employer payments to private and government employee retirement plans, private group health and life insurance plans, privately administered workers' compensation plans, and supplemental unemployment benefit plans.

**Proprietors' income** includes inventory valuation and capital consumption adjustments and is defined as the income, including income-in-kind, of proprietorships and partnerships, and of tax-exempt cooperatives. Inventory valuation adjustment is the difference between the cost of inventory withdrawals as valued in determining profits before tax, and the cost of withdrawals valued at current replacement costs. Capital consumption adjustment is depreciation and damage to a proprietor's fixed capital less the value of the current services of the fixed capital assets owned by and used by the proprietor.

*Dividends, interest, and rent.*

**Dividend income** consists of the payments in cash or other assets, excluding the corporation's own stock, made by corporations located in the United States or abroad to persons who are U.S. residents; it excludes that portion of dividends paid by regulated investment companies (mutual funds) related to capital gains distributions. **Interest** is the interest income (monetary and imputed) of persons from all sources. **Rental income** is the net income of persons from the rental of real property except for the income of persons primarily engaged in the real estate business; the imputed net rental income of the owner-occupants of nonfarm dwellings; and the royalties received from patents, copyrights, and the right to natural resources. The **imputed net rental income** component of **rental income** is based on the accounting assumption that owner occupants are in the rental business and that they are renting the house in which they live to themselves; expenses, taxes, mortgage interest, and depreciation are deducted from imputed rental income.

*Imputed net rental income of owner occupied nonfarm dwellings is a significant portion of rental income and total personal income.*

**Personal current transfer receipts** are payments to persons for which no current services are performed. They consist of payments to individuals by Federal, state, and local governments and by businesses. Government payments to individuals include retirement and disability insurance benefits,

medical payments (mainly Medicare and Medicaid), income maintenance benefits, unemployment insurance benefits, veterans benefits, and Federal grants and loans to students. Business payments to persons consists primarily of liability payments for personal injury.

**Contributions for government social insurance** are subtracted in the calculation of personal income and consist of the contributions, or payments, by employees, by the self-employed, and by other individuals who participate in the following government programs: Old-age, survivors, and disability insurance (social security); hospital insurance; supplementary medical insurance; unemployment insurance; railroad retirement; veterans life insurance; and temporary disability insurance. These contributions are excluded from personal income by definition, but the components of personal income upon which these contributions are based (mainly wage and salary disbursements and proprietors' income) are presented gross of these contributions.

**Residence adjustment** is the net amount of personal income of persons residing in a specific geographic area but receiving the income outside that geographic area. For example, a person who earns income in one county but lives in a different county would have that income counted under residence adjustment; the county in which the person lives would have a positive residence adjustment and the county in which the person works would have a negative adjustment. Residence adjustment adjusts the earned component of personal income, which is establishment-based by place of work, to population, which is by place of residence. When total personal income is adjusted this way, personal income per capita can be calculated. Residence adjustment is a net number for a given county; if it is negative, it means that there is net commuting into the county; if it is positive, it means that there is net commuting out of the county.

As with employment, the definition of total personal income used by Woods & Poole is the most comprehensive one available. Another commonly used measure of income is money income of persons. **Money income** is the concept used by the Bureau of the Census, and is widely used in other sources. In those cases where Woods & Poole's income data are higher than data from another source once inflation adjustments are taken into account, it is probably because the other source uses money income base data. Total personal income includes all of money income plus the exclusions to money income. Money income excludes payments-in-kind such as food stamps, agricultural payments-in-kind, and the value of in-kind medical payments; the imputed rental value of owner-occupied housing; the imputed value of certain interest payments such as the value to consumers of free non-interest bearing checking accounts; all other labor income; capital consumption adjustments for proprietors; inventory valuation adjustments, although sometimes this is negative; and lump-sum payments such as liability judgments and consumer defaults on debts to businesses. For the U.S. as a whole, money income is about 25% less than total personal income; at the regional level, the difference varies depending on the specific composition of total personal income.

Another commonly used measure of income is **disposable income**, which is defined as total personal income less personal tax and non-tax payments. Disposable income is the income available to persons for spending or saving.

*Personal income (and income per capita) data used by Woods & Poole are usually much higher than money income data used by the Census because money income excludes some forms of income.*

Tax payments are payments, net of refunds, made by persons to the government; it includes taxes such as income, estate and gift, and personal property taxes, but it excludes personal contributions to social insurance. Non-tax payments include tuition and fees paid to schools and hospitals operated mainly by the government, donations to such institutions, passport fees, and fines and penalties.

### **Retail Sales and Food Services Sales**

*Retail sales data are historical for the years 1972, 1977, 1982, 1987, 1992, 1997, 2002, 2007, 2012, and 2017; estimated for all other years 1969–2017; and projected for the years 2018–2060.*

*Retail sales by kind of business are based on NAICS classifications. Total retail sales includes food services and drinking places.*

Data for retail sales by kind of business are from the 1972, 1977, 1982, 1987, 1992, 1997, 2002, 2007, 2012, and 2017 Census of Retail Trade (U.S. Department of Commerce, Bureau of the Census). Retail sales data for 1972, 1977, 1982, 1987, 1992, and 1997 have been changed by Woods & Poole from SIC classifications to estimated NAICS kind of business classifications to be consistent with 2002 Census of Retail Trade data. The intervening historical data for the years 1969–71, 1973–76, 1978–81, 1983–86, 1988–91, 1993–1996, 1998–2001, 2003–2006, 2008–2011, and 2003–2016 are also estimated by Woods & Poole. These estimates are made by interpolating retail sales by kind of business per capita for the intervening years (e.g., 1973–1976). These proportions are then multiplied by population for the intervening years to estimate retail sales by kind of business. The estimates are then constrained to U.S. retail sales by kind of business for the intervening years. U.S. retail sales data for 1969–2017 are from the Bureau of Economic Analysis, but are revised by Woods & Poole to be consistent with the sum of the county retail sales data for the Census years. Therefore, retail sales data for the U.S. are the sum of county retail sales as published in the Census of Retail Trade, and differ from the U.S. data published monthly by the Department of Commerce.

Some county data from the Census of Retail Trade are withheld because of Federal information disclosure policies. All withheld data have been estimated by Woods & Poole; the techniques used to make these estimates are described below in the section titled "Estimation of Missing Historical Data."

In the 2024 Woods & Poole database, total retail sales are modified to include food services and drinking places sales (NAICS 722). The inclusion of food services and drinking places sales makes total retail sales more consistent with the SIC definition.

Retail sales are counted, as are employment and earnings, on an establishment basis. Mail-order sales are counted at the point from which the merchandise is sent and not at the point at which it is received. Retail sales are classified by kind of business according to the principal lines of commodities sold (e.g., groceries or hardware) or the usual trade designation (e.g., drug store or cigar store). In some cases, an establishment sells goods in several different business groups, such as a convenience store with gasoline pumps. In these cases, all the establishment's sales are classified in the business group that is the primary activity of the establishment; therefore, the retail sales data by kind of business does not reflect retail sales by merchandise line. The specific kinds of business, on an NAICS basis, are described as follows:

**Motor vehicle and parts dealers** include establishments selling new and used cars and trucks, boats, recreational vehicles, utility trailers, aircraft, snowmobiles,

motorcycles, snowmobiles, and mopeds. It also includes dealers selling new automobile parts and accessories, such as tires, as well as automobile repair shops maintained by establishments engaged in the sale of new automobiles. Establishments selling medium and heavy-duty trucks are generally excluded.

**Furniture and home furnishings stores** include establishments primarily selling new furniture, floor coverings, draperies and window treatments, glassware and china. Bath, linen, mattress and lamp stores are included. Used furniture, appliance, and electronics stores are excluded.

**Electronics and appliance stores** include establishments selling new consumer electronics, televisions, radios, home appliances, computers, cameras and photography supplies.

**Building material and garden equipment and supplies dealers** include retail establishments primarily engaged in selling lumber and other building materials; paint, glass, and wallpaper; hardware; nursery stock; lawn and garden supplies; and outdoor power equipment. It includes lumber and other building materials dealers, and paint, glass, and wallpaper stores selling to the general public, even if sales to contractors account for a larger proportion of total sales. Dealers selling mobile homes are excluded.

**Food and beverage stores** include establishments primarily engaged in selling for home preparation and consumption. Food stores include grocery stores, such as supermarkets and convenience stores; meat and fish markets; fruit and vegetable markets; candy, nut, and confectionery stores; dairy product stores; retail bakers; and miscellaneous stores such as beer, wine and liquor stores, health food stores, and coffee and tea stores.

**Health and personal care stores** include pharmacies and drug stores; cosmetic, beauty supplies and perfume stores; optical goods stores; health supplement stores; and convalescent supply stores.

**Gasoline stations** include establishments primarily selling gasoline and automotive lubricants. These establishments frequently sell other merchandise, such as tires, batteries, accessories, and other automobile parts, or perform minor repair work. Establishments called garages but deriving more than half of their receipts from the sale of gasoline and automotive lubricants are included. Gasoline stations combined with other activities such as convenience stores or car washes are classified by their primary activity as determined by sales.

**Clothing and clothing accessories** include retail stores primarily engaged in selling clothing of all kinds and related articles for personal wear and adornment. These establishments include men's, boys', women's, infants' and girls' clothing stores; shoe stores; and specialty stores, such as swimwear, wigs, lingerie, luggage and handbags. Establishments that meet the diversity criterion for department stores are not included. Excluded are custom tailors and athletic uniform stores.

**Sporting goods, hobby, book, and music stores** include sporting goods stores (including bicycle stores, golf pro shops, exercise equipment stores and gun shops); hobby, toy and game stores; sewing and needlework stores; musical instrument and supply stores; bookstores, newsstands, and music stores. Excluded are used bookstores.

**Motor vehicle and parts dealers retail sales.**

**Food and beverage stores retail sales, including grocery store retail sales.**

***Nonstore retailers sales, including internet retail sales.***

**General merchandise stores** include department stores, general discount stores, variety stores, warehouse clubs, and miscellaneous general merchandise stores. These stores all sell a number of lines of merchandise, such as dry goods, apparel and accessories, furniture and home furnishings, small wares, hardware, and food in one establishment.

**Miscellaneous retail stores** include florists; office supply, stationery and gift stores; used merchandise stores such as thrift stores, used bookstores, and antique shops; pet shops; art dealers; mobile home dealers; swimming pool stores; and tobacco stores.

**Nonstore retailers** include Internet sellers; mail-order and catalog sellers; television and infomercial sellers; door-to-door sellers; vending machine operators; and direct selling establishments such as heating oil dealers, bottled gas dealers, newspaper delivery, and bottled water providers.

**Food services and drinking places** include establishments selling prepared food and drinks for consumption on the premises, as well as lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption. These establishments include restaurants and lunchrooms; social caterers; cafeterias; refreshment places, such as take-out hamburger and chicken stands; contract feeding, such as institutional food service; ice cream and frozen yogurt stands; and drinking places, such as bars and lounges.

## **Population**

***Total population data are historical for the years 1969–2022, and projected for the years 2023–2060.***

Historical population data for the years 1969 to 2022 are based on estimates from the U.S. Department of Commerce, Bureau of the Census. The historical county total population and population by single year of age by race and by sex data for 1969 to 1979 are estimated based on 1970 and 1980 Census data, 1980 to 1989 are from the Census Bureau intercensal county estimates, 1990 to 2009 are from National Center for Health Statistics (NCHS) intercensal estimates based on Census estimates, 2010 to 2019 are Woods & Poole intercensal estimates of NCHS postcensal estimates and Census Vintage 2022 April 1 2020 estimates base data, and 2020 to 2022 are from Census Bureau Vintage 2022 postcensal estimates.

***Adjusted Census 2020 results are included the 2024 Woods & Poole database.***

The historical population data in the 2024 Woods & Poole database include Census Bureau Vintage 2023 total population data for 2020 through 2023 based on more information from the 2020 Census.

***Population data are July–1 based in each year, 1969–2060.***

Population is defined as July 1 residential population and includes: civilian population; military population except personnel stationed overseas; college residents; institutional populations, such as prison inmates and residents of mental institutions, nursing homes, and hospitals; and estimates of undocumented aliens. Excluded are persons residing in Puerto Rico, U.S. territories and possessions, and U.S. citizens living abroad.

**Postcensal population** data are annual estimates of population after the previous decennial census for the U.S. total or smaller geographies based on annual mortality and natality data, and migration into and out of the geography. Each year postcensal estimates build on postcensal estimates from the previous years in the decade. At the end of the decade a postcensal estimate is made for the decennial census year using the same methodology and the difference between the actual decennial census results and the

postcensal estimate (the “error of closure”) is distributed proportionally to the annual postcensal estimates to create time series population data, **intercensal estimates**, consistent with both the previous decennial census and the new decennial census.

For the years 1990 to 2060 the population data are broken down by five race/ethnic groups: White Not Hispanic or Latino, Black or African American Not Hispanic or Latino, American Indian or Alaska Native Not Hispanic or Latino, Asian and Native Hawaiian or Pacific Islander Not Hispanic or Latino, and Hispanic or Latino. Population by race as defined by the Census Bureau is based on self-identification by respondents.

**Hispanic or Latino population** is a description of ethnic origin. Although Hispanic or Latinos are part of the other four race groups, they are shown separately in the Woods & Poole database so that the four race groups plus Hispanic or Latino equals total population.

Hispanic or Latino data are historical for 1970, 1980, and 1990–2010 from the decennial Censuses, adjusted to July 1, and from Census Bureau intercensal and postcensal population estimates. For counties with Hispanic or Latino population greater than 40,000, actual historical data for 1981–1985 from a special Census Bureau report are included. Census Bureau data are also included for the U.S. for 1969–1990, and for states for 1981–1985 and 1990. Hispanic or Latino data for all other years are estimated. The Woods & Poole Hispanic or Latino population data for 1980 differ significantly from the final 1980 Census for some states, e.g., Alabama and Mississippi; this is because of post-1980 Census Bureau revisions to the 1980 Census that are incorporated in the Woods & Poole data.

For the years 1970 to 1989, the population in the Woods & Poole database is available in three race groups which sum to total population: White, Black or African American, and a combined race group of American Indian or Alaska Native and Asian and Native Hawaiian or Pacific Islander. All three of these race groups include Hispanic population. The total Hispanic or Latino data for 1970 to 1989 are provided separately. Although the total Hispanic or Latino population and the population by age and sex for the years 1970 to 1989 are consistent with the data 1990 to 2060, the population by race data are not.

The 2024 Woods & Poole database includes Census Bureau vintage 2023 **Total population** data for July 1, 2020 through July 1, 2023 (estimated) based on information from the 2020 Census. The 2024 Woods & Poole database does not include the final 2020 Census data. The Woods & Poole database includes **2010 Census population** data, adjusted to July 1, for total population by single year of age, race and sex. However, the 2010 Census race classifications were adjusted to create a consistent time-series for the years 1990 to 2010. The 2010 Census **Hispanic or Latino Some Other Race population** (18.50 million people) were added to the 2010 Hispanic population by age and sex, and the **Not Hispanic or Latino Some Other Race population** (0.61 million people) were added to White, Black or African American, American Indian or Alaska Native, and Asian and Native Hawaiian or Pacific Islander population proportionally by age and sex. The 2010 Census **Hispanic or Latino Two or More Races population** (3.04 million people) were added to the 2010 Hispanic population by age and sex, and the

**Total population is the sum of White, Black or African American, American Indian or Alaska Native, Asian and Native Hawaiian or Pacific Islander, and Hispanic or Latino.**

**Although the Woods & Poole database reflects the 2000 and 2010 Census race classifications, the race groups “Some Other Race” and “Two or More Races” are allocated to the other race groups to create data consistent with data for 1990–1999.**

**Table 4. Personal Consumption Expenditure Price Index (2017 = 100)**

1969	18.88	1992	63.42	2015	97.30	2038	187.15
1970	19.77	1993	65.00	2016	98.28	2039	192.51
1971	20.61	1994	66.36	2017	100.00	2040	198.03
1972	21.31	1995	67.75	2018	102.05	2041	203.70
1973	22.46	1996	69.20	2019	103.51	2042	209.53

**Note:** Historical data, 1969–2023, are from U.S. Dept. of Commerce; projected data, 2024–2060, are from Woods & Poole Economics, Inc.

*Not Hispanic or Latino Two or More Races population* (5.97 million people) were added to White, Black or African American, American Indian or Alaska Native, and Asian and Native Hawaiian or Pacific Islander population proportionally by age and sex.

The population data in the Woods & Poole database are generally consistent with data from other sources, including the Census Bureau. The most significant difference between the Census Bureau data used by Woods & Poole and the actual 1970, 1980, 1990, 2000, and 2010 Census results is that Woods & Poole data are July 1-based, and the decennial census data are April 1-based. Decennial census data were adjusted forward from April 1 to July 1 to make them consistent with population data for other years, as well as with the employment and income data which are also July 1-based.

### Constant and Current Dollars

All earnings, personal income, and retail sales data in the Woods & Poole database are presented in 2017 dollars. These are called "constant" dollars, and are used to measure the "real" change in earnings and income when inflation is taken into account. For example, it would be incorrect to assume that Americans were more than twice as wealthy in 1980 as in 1970, even though income per capita increased from \$4,194 to \$10,180. During those ten years, the general price level increased 97%, and \$10,180 in 1980 could not buy as much as \$10,180 could in 1970. When

adjusted for the rate of inflation by making income per capita "constant" in 2017 dollars, the increase from 1970 to 1980 was only 24% (\$21,214 to \$26,217).

In the Woods & Poole database, the personal consumption expenditure price index, part of the BEA National Income and Product Accounts, is used to convert current dollars into constant dollars. The personal consumption expenditure price index for each year from 1969 to 2060 is listed in Table 4. To convert current dollar data to 2017 dollars, divide the current dollars by the price index for the appropriate year in Table 4 divided by 100. To convert constant 2017 dollar data into current dollars, multiply the constant dollars by the price index for the appropriate year in Table 4 divided by 100. The formulas in the side-bar box on this page outline the procedure to convert constant dollars to current dollars and vice versa. The same price index is used for the U.S. and all counties in the Woods & Poole database; hence, the rate of inflation (the percent difference year to year in the price index) is assumed to be constant for all parts of the country.

## Households

The data for households are from Census Bureau counts in 1970, 1980, 1990, 2000, 2010, and 2020 and Census Bureau estimates for 1985. As with population, the household data from the decennial censuses were adjusted from April 1 to July 1. The 1985 Census Bureau estimate was already July 1-based. All other years of county household data (i.e., 1969, 1971-1979, 1981-1984, 1986-1989, and 1991-1999) are estimates. Household data for the U.S., 1969-2010, are based on Census Bureau data.

Household data for total number of households, group-quarters population, and average size of households from the **1990, 2000, 2010, and 2020 Census**, adjusted to a July-1 base, are included in the Woods & Poole database.

Households are defined as occupied housing units. A housing unit is a house, an apartment, a group of rooms, or a single room occupied as separate living quarters. The occupants of a housing unit may be a single family, one person living alone, two or more families living together, or any group of related or unrelated persons who share living quarters. All people are part of a household except those who reside in group quarters. Group quarters include living arrangements such as prisons, homes for the aged, rooming houses, college dormitories, and military barracks. The average size of households is defined as total population less group-quarters population divided by the number of households. Mean household income is defined as total personal income less estimated income of group-quarters population divided by the number of households.

## Households by Income Bracket

The number of households by income bracket is historical only for 1990, 2000 and 2010 and are based on Census and American Community Survey (ACS) data for household income in the years 1989, 1999, and 2009, respectively. The income brackets are in 2009 (not 2017) dollars, and since the brackets themselves are not adjusted over the projection horizon, all brackets from 1990 to 2060 are also in 2009 (not 2017) dollars. The 2010

*To convert a current dollar series to constant dollars:*

$$\text{current \$} \div \text{price index} = \text{constant \$}$$

*To convert a constant dollar series to current dollars:*

$$\text{constant \$} \times \text{price index} = \text{current \$}$$

*To convert the price index to a different base year (e.g. 2022):*

$$\text{index}_{(2012=100)} \div \text{2022 index} = \text{price index}_{(2022=100)}$$

*Household data are historical for the years 1970, 1980, 1985 1990, 2000, 2010 and 2020; estimated for all other years 1969-2019; and projected for the years 2021-2060.*

*The projections of households by income bracket are based only on data from the 2010 American Community Survey. The brackets for all years are in 2009 (not 2017) dollars.*

ACS income brackets are retained for the projection years; as a result, in the Woods & Poole projections, there is a heaping of households into the higher-income brackets because of projected real increases in total personal income. The projection of the number of households by income bracket is made simply by changing the median income for the years 2011 to 2060 in relation to projected mean household income, and retaining the income distribution around the 2010 median. The lack of historical time series data for county households by income bracket means that the projections are based on a single observation point; projections based on extrapolations from a single data point are less reliable than projections based on time-series data.

### **Woods & Poole Wealth Index**

*The Woods & Poole Wealth Index is a weighted measure of Personal Income per Capita by source of income.*

The Woods & Poole Wealth Index is a measure of relative total personal income per capita weighted by the source of income. The Wealth Index is the weighted average of regional income per capita divided by U.S. income per capita (80% of the index); plus the regional proportion of income from dividends/interest/rent divided by the U.S. proportion (10% of the index); plus the U.S. proportion of income from transfers divided by the regional proportion (10% of the index). Thus, relative income per capita is weighted positively for a relatively high proportion of income from dividends, interest, and rent, and negatively for a relatively high proportion of income from transfer payments. Because the imputed rent of owner-occupied homes is added to rental income of persons in calculating total personal income, some of the appreciated value of owner-occupied homes is included in rental income. Since dividends, interest, and rent income is a good indicator of assets, the Woods & Poole Wealth Index attempts to measure relative wealth.

### **Comparative Data**

Some Woods & Poole statistical tables and data files contain summary data on unemployment, number of business establishments, and educational attainment. These data are provided for comparison purposes and are not part of the Woods & Poole forecasting model.

**Labor force and unemployment** data are from the Bureau of Labor Statistics. Data are provided for the civilian labor force, employment, unemployment, and the unemployment rate for 2013 to 2023. Employment is defined by the Bureau of Labor Statistics and excludes military employment and proprietors. Civilian labor force is defined as people who are either employed or who are unemployed and looking for work; civilian labor force is the sum of the employed and unemployed. The unemployment rate is the number of people unemployed divided by the civilian labor force. The monthly data are not seasonally adjusted. The labor force, employment, and unemployment data are all by place of residence and not by place of work.

*Number of establishments by size and industry for 2018 and 2019. Number of establishments by industry are based on NAICS classifications.*

**Business establishments** by size and industry is from the Bureau of the Census. Data are provided for the total number of business establishments, as well as the number of establishments with fewer than 50 employees and the number with 50 or more employees by one-digit NAICS industries. The data are for March 2018 and March 2019 and are not an annual average. The number of business establishments excludes proprietors and government entities. The industry groups are based on 2002 North American Industry Classification

System (NAICS) definitions. The data on the number of business establishments include establishments by industry that are statewide and not part of any particular county. In the Woods & Poole database, statewide establishments are distributed proportionally to counties within the state based on the number of establishments by industry within a particular county; therefore, Woods & Poole county data may differ from other published data.

**Educational attainment** data for the years 1970, 1980, 1990, and 2000 are from decennial Census data and 2010 data are from the American Community Survey. The percent of the population age 25 or more not completing high school, completing high school, and completing four or more years of college is reported. The educational attainment data are based on self-reporting by decennial Census respondents, and are not matched to actual school enrollment or graduation data.

**Land area** is from the 2010 Census and is in square miles. The data are for all U.S. counties; the land area for geographic units larger than county (including the U.S. as a whole) is calculated by summing county land area.

### Estimation of Withheld Historical Data

Some historical earnings and employment data by sector are withheld by the Department of Commerce. Data are usually withheld in small sectors with small values in a specific county. In order to make the database consistent, and facilitate the forecasting model, all missing data points were estimated by Woods & Poole. In sum, approximately 4% of all data in the historical database were withheld and had to be estimated.

The algorithms used to estimate the missing data were applied in two stages. First, a "best guess" of the missing data was obtained. For example, in the case of mining employment, missing data for a county were estimated by observing the relationship between that county's mining employment in reported years and statewide mining employment for the same years. This method took into account, when possible, fluctuations in a series because of business cycles during the historical period. When sufficient years in a series were reported to provide statistical reliability (this occurred in approximately 33% of the cases where data were withheld), business cycles were all estimated separately, thus enabling reliable estimates to be made of the missing data points. In other cases, where too many years in a series were withheld, business cycles were not taken into account; however, the same method of observing the relationship between county series, in reported years, to the state series in the same years was used (this occurred in approximately 61% of the cases). In approximately 6% of the cases, the data for a county series, such as mining employment, were withheld for every year, and the relational method would not work. In these cases, the relationship between total economic activity in the county to the state, in a non-cyclical manner, was used to derive "best guess" results.

Once the "best guess" results were estimated, an iterative procedure was used to simultaneously constrain the "best guess" to the county control total, (i.e., total employment in the above example) and the state total for the series (i.e., state mining employment in the above example). This iterative procedure, beginning with the "best guess" solution, produced, for all missing

**Educational attainment.**

**Some historical data in the Woods & Poole database are estimated.**

data points, a convergence point that is used as historical data. However, since the data are truly withheld, there is no mathematically tractable solution to the problem of missing data. Estimated withheld data are indicated for employment and earnings of employees in the Woods & Poole database printed tables with an "e" following the estimated data; estimated withheld data for retail sales by kind of business and other data series is not indicated in the Woods & Poole database.

### County Definitions

The county definitions and county-equivalent definitions used in the Woods & Poole database are defined by the BEA. In New England, counties were created by summing townships and creating county-equivalent areas. Parishes in Louisiana, Boroughs in Alaska, and Independent Cities in Maryland, Missouri, and Nevada are called counties in the Woods & Poole database. In some states, notably Virginia, counties exist with independent cities. In cases where boundaries between counties and independent cities (or counties and other counties) have changed since 1969, new county groups were created to maintain the consistency of the historical data. Table 5 lists all the special county groupings in the Woods & Poole database.

A number of counties aggregated in previous editions of the Woods & Poole database have been disaggregated in the 2024 edition. All of the historical data, 1969 to 2022, for all of the disaggregated counties are estimated. Data and projections for the following counties are now in the Woods & Poole database (FIPS codes in parentheses): Aleutian Islands East Borough AK (02013), Aleutian Islands West Census Area AK (02016), Bethel Census Area AK (02050), Denali Borough AK (02068), Dillingham Census Area AK (02070), Haines Borough AK (02100), Hoonah-Angoon Census Area AK (02105), Kenai Peninsula Borough AK (02122), Lake and Peninsula Borough AK (02164), North Slope Borough AK (02185), Petersburg Borough, AK (02195), Prince of Wales-Hyder Census Area AK (02198), Sitka Borough AK (02220), Skagway Municipality AK (02230), Southeast Fairbanks Census Area AK (02240), Valdez-Cordova Census Area AK (02261), Wrangell City and Borough AK (02275), Yakutat Borough AK (02282), Yukon-Koyukuk AK (02290), La Paz AZ (04012), Yuma AZ (04027), Broomfield CO (08014), Cibola, NM (35006), Valencia, NM (35061), Menominee, WI (55078), and Shawano, WI (55115).

The eight Connecticut legacy counties, and not the nine Connecticut planning regions, which replaced Connecticut counties beginning in 2022, are used in the 2024 Woods & Poole database. The following planning regions are not included in the 2024 database (FIPS codes in parentheses): Capitol Planning Region CT (09110), Greater Bridgeport Planning Region CT (09120), Lower Connecticut River Valley Planning Region CT (9130), Naugatuck Valley Planning Region CT (09140), Northeastern Connecticut Planning Region CT (09150), Northwest Hills Planning Region CT (09160), South Central Connecticut Planning Region CT (09170), Southeastern Connecticut Planning Region CT (09180), and Western Connecticut Planning Region (09190). Census postcensal population data, which were reported in planning regions and not legacy counties, for 2020

to 2022 (which sum to the state total) were distributed to legacy county geographies using legacy county proportions of the Connecticut state total.

**Federal Information Processing Standards (FIPS)** codes are defined by the National Institute of Standards and Technology to give numeric "names" to geographic areas such as states and counties. Each state has a two-digit FIPS code (Alabama is 01 and Wyoming is 56) and counties have five-digit codes with the first two digits being the state code: Autauga AL is 01001 and Weston WY is 56045.

### Average Annual Rate of Growth

In some statistical tables in Woods & Poole publications, data are presented for the average annual rate of growth for a particular variable over a specified time period. The average annual rate of growth is the compounded growth of a variable over time. Thus, a 3.0% average annual rate of growth between 1970 and 1980 for population would mean that, on average, the population increased 3.0% each year between 1970 and 1980.

An average annual rate of growth can be calculated by dividing the data year  $t+n$  by data year  $t$  and calculating the  $n$ th root of the quotient (where  $n$  is the number of years between  $t$  and  $t+n$ ). Subtract one and multiply by 100 to convert the growth into percent. A negative average annual rate of growth would mean a decline in the variable over time.

*Average annual rate of growth for variable  $x$  between year  $t$  and year  $t+n$  is:*

$$((x_{t+n} \div x_t)^{1/n}) - 1 \times 100$$

*The revised July 2023 Metropolitan Area definitions are used in the 2024 Woods & Poole database, except for metros containing Connecticut planning regions.*

*There are four Metropolitan Area classifications: CSAs, MSAs, MICROS, and MDIVs.*

## Rounding of Data

Data for the U.S., states, Core Based Statistical Areas (CBSAs), and other regions are the sum of counties. Due to rounding, the subtotals in Woods & Poole data tables may not exactly equal the components. Special calculations in some data tables (e.g., population growth rates) also may not exactly equal the data because of rounding. Since the U.S. and state data are based on county estimates, they may differ from U.S. and state data available from other sources.

## Metropolitan Area Definitions

Metropolitan Statistical Areas (MSAs), Combined Statistical Areas (CSAs), Micropolitan Statistical Areas (MICROS), and Metropolitan Divisions (MDIVs) in the Woods & Poole database are as defined in the July 2023, Office of Management and Budget (OMB BULLETIN NO. 23-01), Revised Delineations of Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and Guidance on Uses of the Delineations of These Areas, except for metros containing Connecticut planning regions.

All Woods & Poole historical data back to 1969 are revised to reflect the new 2023 OMB Metropolitan Area (MSA, CSA, MICRO, and MDIV) definitions, except for metros containing Connecticut planning regions which are based on 2020 OMB definitions based on Connecticut legacy counties. There are 385 MSAs, 181 CSAs, 536 MICROS, and 37 MDIVs in the 2024 Woods & Poole database. A list of all CSAs, MSAs, MICROS, and MDIVs and their component counties can be found in Appendices 2, 3, 5 and 4, respectively. These Appendices follow this chapter and begin on page 46. Although CSAs can be defined in terms of MSAs and MICROS, in the Woods & Poole database, and in Appendix 2, they are defined in terms of counties.

OMB 2023 metro areas that include one or more Connecticut planning region are not included in the 2024 Woods & Poole database. The following OMB July 2023 metro areas are not included (FIPS codes in parentheses): Boston-Worcester-Providence, MA-RI-NH CSA (148), New Haven-Hartford-Waterbury, CT CSA (405), New York-Newark, NY-NJ-CT-PA CSA (408), Bridgeport-Stamford, Danbury, CT MSA (14860), Hartford-West Hartford-East Hartford, CT MSA (25540), New Haven, CT MSA (35300), Norwich-New London-Willimantic, CT MSA (35980), Waterbury-Shelton, CT MSA (47930), Worcester, MA MSA (49340), Putnam, CT MICRO (39480), and Torrington, CT MICRO (45860).

OMB 2020 (OMB BULLETIN NO. 20-01) metro areas that include one or more Connecticut legacy county are included in the 2024 Woods & Poole database. The following OMB March 2020 metro areas are included: Boston-Worcester-Providence, MA-RI-NH-CT CSA (148), New York-Newark, NY-NJ-CT-PA CSA (408), Bridgeport-Stamford-Norwalk, CT MSA (14860), Hartford-East Hartford-Middletown, CT MSA (25540), New Haven-Milford, CT MSA (35300), Norwich-New London, CT MSA (35980), Worcester, MA-CT MSA (49340), and Torrington, CT MICRO (45860). The OMB 2020 metros are defined in Appendices 2, 3, and 5. All eight Connecticut legacy counties are part of one of the six OMB 2020 MSAs and MICROS included in the 2024 database so the entire state of Connecticut is covered in the 2024 database.

Core Based Statistical Areas (CBSAs) are included in the Woods & Poole database. CBSAs are MSAs or MICROS, and CBSA is a collective term for both of these geographies. There are 921 CBSAs in the Woods & Poole database, based on the OMB 2023 definitions, including adjustment made for Connecticut CBSAs.

MSAs, as defined by the OMB, have at least one urbanized area of 50,000 or more population, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties. Micropolitan Statistical Areas—a new set of statistical areas—have at least one urban cluster of at least 10,000, but less than 50,000 population, plus adjacent territory that has a high degree of social and economic integration with the core as measured by commuting ties. The central cities that form the basis on MSAs and MICROS are generally included in their titles, as well as the name of each state into which the MSA or MICRO extends. MSAs and MICROS are defined in terms of whole counties (or equivalent entities), including in the six New England states. If the specified criteria are met, an MSA containing a single core with a population of 2.5 million or more may be subdivided to form smaller groupings of counties referred to as Metropolitan Divisions. MDIVs are not comparable to either MSAs or MICROS, and should not be ranked together.

According to the OMB, if specified criteria are met, adjacent MSAs and MICROS, in various combinations, may become the components of a new set of areas called Combined Statistical Areas. For instance, a CSA may comprise two or more MSAs, a MSA and a MICRO, two or more MICROS, or multiple MSAs and MICROS. In the Woods & Poole database, CSAs are defined in terms of counties. According to the OMB, combinations for adjacent areas with an employment interchange of 25 or more are automatic. Combinations for adjacent areas with an employment interchange of at least 15 but less than 25 are based on local opinion as expressed through the Congressional delegations.

## Regions

The eight *regions* in the Woods & Poole database are aggregates of states and are defined by the Bureau of Economic Analysis. A list of all BEA regions and their component states can be found in Appendix 1 following this chapter. The BEA regions used by Woods & Poole differ from the nine regions defined by the Census Bureau and used in its publications.
